"Goal of Science" Talk Proves Relevant

by Bob Kerr

At this week's meeting of the Society of Physics Students, a very thought provoking talk was presented by Roger Gilman of IHMT-Department (philosophy). The talk, Physics and the Goal of Science, was concerned with itself with the fundamental questions of science, an explanation description, and the views of today. These views were presented as positivists and pragmatists in opposition to the view held by technologists, that of possible ultimate content.

According to Gilman, knowledge can be broken down into two main areas:—that which is logically true, and that which is empirically true. Logical truth is that which is true by definition (i.e., the law of non-contradiction), and empirical truth is that which is true by experience (i.e., the law of induction).

To place science in one of the two categories is very difficult; Gilman thinks it may be impossible. Scientific hypotheses (laws, explanations, theories) are capable of being false but must be confirmed. This points to science as being empirical; however, once a hypothesis has been confirmed, it is accepted as logical truth and thus is more from the empirical to the logical.

Science hypotheses are, of course, generalities as opposed to historical hypotheses which deal with one group at a time, periods. There are two types, according to Gilman: universal and particular. The universal generalization uses the all quantifier and are generalities such as Newton's Laws of Motion. The statistical generalization use the some, probability, percentage of quantifier and are hypotheses such as Quantum Theory. A universal generalization would state that matter is a string of causative effects with a 100% predictability; a statistical generalization assumes any effect has a cause, but the specific cause is continued on page 5.

Early NCA Results "Optimistic"

The North Central Athletic Association's basketball tournament, which was held this week, was a success for the athletes. The teams worked hard and played well, and the results were impressive. The tournament had a total of 16 teams, and the final four teams were chosen based on their performance throughout the tournament. This year's tournament was held in Chicago, and the local team, the Chicago Bulls, made it to the final four. The tournament was a great success, and the athletes were able to showcase their talents on the court.

The tournament was a great success, and the athletes were able to showcase their talents on the court. The local team, the Chicago Bulls, made it to the final four. The tournament was a great success, and the athletes were able to showcase their talents on the court.

The Chicago Bulls, who hit 267 field goals during the season, were able to pull off a win against the Indiana Pacers in the semifinals. The Bulls played well throughout the tournament, and their experience paid off in the end. They were able to make a comeback against the Pacers, and their hard work and dedication paid off.

WOU! Troubles Prevent FM Conversion

WOU! the campus radio station (formerly WUL and WUL), scheduled to begin FM broadcasting October 31st, has once again been prevented in their attempt to begin FM broadcasting. A mechanical difficulty has caused the University to cancel the broadcast. The station's staff is in the process of finding a solution to the problem. They hope to begin broadcasting soon.

The station's staff is in the process of finding a solution to the problem. They hope to begin broadcasting soon.
If Oswald Didn't Do It, Who did?

by Dan McCallum

The Senate Select Committee on Intelligence Activities said in a report in June 1976 that the Federal Bureau of Investigation and the Central Intelligence Agency had failed to fulfill their obligations in investigating the assassination of President John F. Kennedy in 1963. While concluding that there was no new evidence to justify a conclusion that there was a conspiracy to assassinate President Kennedy, "the report called for a follow-up investigation of the murder by the new Senate Intelligence Committee."

The report said that the CIA leadership had ignored the possibility of a connection between its own assassination attempts against Prime Minister Fidel Castro of Cuba and the murder of President Kennedy. Further, it accused the CIA of having deceived the investigatory commission headed by Chief Justice Earl Warren about its knowledge of facts relating to the assassination.

Specifically, the report said that Allen W. Dulles, Director of Central Intelligence until the spring of 1962, had never told the Warren Commission of his knowledge of previous assassination plots against Castro, which could have provoked Cuban retaliatory actions.

Senator Richard Schweiker of Pennsylvania, who chaired the Senate Intelligence Subcommittee on the Kennedy Assassination, said, "there is no question but that both the CIA and FBI lied to the Warren Commission." He added, "at this point we don't even know if Oswald shot the President or how many people may have been involved in the assassination." Schweiker also pointed out that "the FBI deliberately destroyed basic evidence very smoothly."

The swine flu innoculation campaign came to a halt at Ft. Dix, N.J., early this month after a report from the U.S. Public Health Service that recommended delaying it due to the risk of complications from the flu vaccine.

Swine Flu Innoculation Campaign Over

by Dale Forrester

The swine flu innoculations began exactly nine o'clock on Wednesday morning, November 10th, in the Commons. Though it was early in the day and unusually cold outside, lines of students had waited patiently for the process to begin. As the day progressed, more students and staff joined the waiting line, and procedures followed assembly-line style. Dr. Braithwaith and about ten assistants pumped the trigger of the jet injector with an air of reinforceing routine, with only minor difficulty. In fact, except for the one or two "vic-tims" that fainted or wore overcoats at the last second (one so overcome, he collapsed in terror), things went smoothly.

Continued from page 3 in last issue and then failed to tell the Warren Commission they had done so.

Schweiker, who successfully urged the Senate conduct a full investigation, has credited Mark Lane and his associates in the Citizens Commission of Inquiry for the "innovative procedure" they had worked out to provide "the motive for the atonement of the Congress.'

Mark Lane is a lawyer, author, filmmaker, former member of the New York state legislature, and founder of the Wounded Knee Legal Defense/Offensive Committee, and the only critic of the Warren Commission's report on the assassination of JFK who conducted an investigation into the murder and who testified before the Warren Commission. He is now the Director of the Citizens Commission of Inquiry based in Washington, D.C.

The possibility of opening the files of the Warren Commission is discussed in the newspapers, but the final decision on the matter has not been announced yet.

Bogey Night at IIT

On Friday, November 10th, the IIT Student Council will hold a special meeting at 7:00 p.m. in the Union Board Room to discuss the possibility of holding a special meeting. The agenda will include the following items:

- Bogey Night at IIT
- Women's Basketball
- Human Lib?
- Union Board Mixer
- BOG Tile Contest Cont.
- EIC Position Opening
- Lost and Found Move
- Registration Advising
- Chapel Tapestry?

At the meeting, the student council will discuss the possibility of holding a special meeting to discuss the situation. The meeting will be open to the public and will be held in the Union Board Room.

ATS Candidates

Traditional Technology News welcomes any new candidates for the position of ATS candidates. The general requirements for candidates are as follows:

- Must be an undergraduate student enrolled in an ATS-related field of study.
- Must have a minimum GPA of 3.0.
- Must be a member of the ATS candidates group.

ATS candidates are expected to contribute to the field of technology and to the community in which they live. They are expected to be active in the ATS candidates group and to participate in all events and meetings.

- Must be willing to volunteer for events and meetings.
- Must be willing to contribute to the field of technology.

To apply for the position of ATS candidate, please submit a letter of application to the chairperson of the ATS candidates group. The application must include:

- A brief statement of your interest in the field of technology.
- A brief statement of your past experience in the field of technology.
- A brief statement of your future plans in the field of technology.

Applications are due by November 15th.
Improvements in Order

So it appears that the NCA is pleased with the way IIT has improved. Over the past four years there has definitely been a change, NCA has noted this, and those of us who have been here all that while have also noticed it. The three major concerns that remain are still of great importance, though probably not as much as before.

More Crime Lately

With the increasing vandalism and robbery in the HUB lately, it’s hard to tell if student attitude is really improving. Unilateralism has increased to a whole new level, and IIT has made a decision to increase the speed of the security patrols.

Careless Candidates

Next week’s AIT elections are coming up. It’s interesting to note that only two people have submitted their requests for office to Technology News, both for the post of Assistant Treasurer. Apparently the other people running don’t consider the whole affair important enough to publish a statement for, which might incline one to wonder just how seriously such people would take their offices in the student government if elected. We suggest that you give this matter some thought before voting for those who are running. 

LETTERS

Hand Over That Bag of Goods There!

Dear Editor:

The recent idea of Chicago as a great learning center, just beause 2 Nobel prizes were awarded at The University of Chicago, should not be overestimated. Since Fermi, there has been a great physicist at Chicago University, or at Argonne National Laboratory, or at Fermi National Accelerator Laboratory for that matter. Moreover, there has never been a great scientist at IIT. I was there, and I know for a fact that it’s rotten. Tika and, by professionals: Ship out, or ship out! Quit being so smug, superior, and condescending, or else the nascent good will will (most assuredly) be something but a fleeting flash in the pan.

Sincerely,
Kenneth J. Epstein
UNAFFILITATED PHYSICIST

Dear Editor:

The anguish of the letter by citizens for a truly better dorm complex, the November 5 issue of Technology News, appealing to the people for help. In bettering human relations at IIT, deserves a lot of thanks. I regret my delay in sending such a move, as I also apologize for having behind a Chaplin Charlie alias in a prior letter. As the moment I find myself focusing more than ever on the principle, already expressed by John F. Kennedy and Martin Luther King, that "when anyone, anytime, is denied their dignity as a human person, we are all denied that dignity," for whatever can be done to one person can be done to any person.

Angelele Amanpour
Chaplin, IIT

letters

Dear Editor:

I find it worthy of mention that the brown crust which the HUB serves as “French onion soup” is no more than dirty napkin wrappings and curdled milk, poured over an insidious blob of stale bread negligently called a “crouton.” Also accepted something at least partially the year French bible

soup, I became nearly sick when I realized just what I had spilled over forty hard earned cents for. The stuff did wonders for my shoes; kept them polished for weeks. But it was inferior as hell. I mean, if they’re going to make this kind of disaster and try to sell it, why be so hypocritical as to call it by supposed gourmet names? Some nonsense such as “dried” or “smut” would be more appropriate, and much more to the point. After all, most of the people who buy that stuff actually like it and would eat it no matter what it was called. Amazing enough, the very same day, I believe, I was in the line and a young lady ahead of me was commenting to one of the cafeteria people on how “excellent” the HUB soup always was and how they had the “best recipes.” See what I mean? If you feel a savage to a modeling corpse, it will feed, but if you feed a gourmet to McDonald’s, it would rather starve.

No one is asked for it.

Letters Policy

The letters to the Editor do not necessarily reflect or express the views of Technology News or IIT. The opinions expressed in these views are those of the author only.

Letters to the Editor are your way of letting the IIT community know how you feel about this and that. The submission of letters to the Editor is encouraged, and persons are asked to send letters to the newspaper. Letters should be signed and accompanied by the author’s name and phone number. Names will be withheld upon request. Include name, telephone number, and general information on yourself. Include the following information:

Name, Address, Phone, Email, School, Year, Major, Minor, General Information

If you wish to submit a letter to the Editor, please send it to the Technology News office, 111 South Federal Street, Chicago, Illinois.
that nature is statistical in nature, and that as such, you are quite correct with your approach of modern science. If, however, you follow the universal approach, you will be in a state of accursed depression until science completely universalizes itself.

Dr. Quesler

The other day my boyfriend and I were in a silly mood and challenged each other in a contest to see which of us could name the most inventions and groups. Since both of us were so silly, we never got much further than the American Medical Association. So we decided to challenge you.

I must admit that I have never heard the American Medical Association to be quite as amusing as you do. Your boyfriend sounds like the kind of guy that if you whispered "AMA" in his ear, he'd follow you anywhere.

I hope you find these associations just as exciting. For instance, there is the Chinese Snuff Belt Society of America (100 bizarre members)...or...how about the International Organization for Transportation by Rope...or...the American Medical Fly Fishing Association...or...mention the Irish Water Spaniel Club of America.

For those of you who are not yet aware, there is the Society of Connoisseurs in Murder, who are quite a rarefied loitering group discussing such pleasant topics as "extreme murders of clergyman"...In Connecticut, there is an organization called the Demonstrants of the Infernal Sons and Daughters of the Kings of England (they refer to themselves as the British Bystanders). There is also the J. W. Smith Society, consisting of 657 male members and threemanaeone:maybe you, J.S., can make it four.

You might be interested in the Millard Fillmore National Society, which only to receive their publication, "Millenness With Billion." If you've been scientifically inclined, there is an Association for Crown Electors, members of which are concerned with the fascinating field of experimental animal work in great forests. There is a stamp-collecting society called the Red Suspender League (it wonder how it collects all the stamps featuring red suspenders).

One of the more bizarre clubs is the Max Will Never Memorial Society Internationale, its motto being "Birds fly; men drink." And don't forget to register your guppies with the American Guppy Association.

If all it takes to stimulate you in "American Medical Association," these other associations must have you in thorough ecstasy by now.

***************

In as much as my name is still absent from the list of two of my choices and I'm still waiting for the last semester's grade report, I would like to think that the administration actually uses IT's computer for these tasks. Do they?

P.S.

The answer to your question leads us through a labyrinth on the first floor of the Main Building. Turned away in the Southwest corner, competing with the noise from the Rock Island and the Dan Ryan Expressway, is the admissions information services section. This office works directly for the Provost, handling student records and personnel functions. It also assists other university departments on some information services management jobs.

A typical assignment would be a statistical breakdown of the student body over any one of a myriad of groupings such as major school, sex, age, right-left handedness, or preferences to accomplish the task. John Coulore, the office's director, uses some keyboarding operators, one computer operator, and operators manager at UNIVAC 1108, and the IBM Unit Records system, add to this list. Use of the UNIVAC 1108 in the Student Building and in the program is of interest in improving student help and you've got a pretty advanced data handling system. The capabilities of the system will be augmented when it's connected to the interactive computer, the Prime 8400, and put on paper. With this capacity it is hoped that the information services office will affect our life in more visible ways and gain a lasting presence in the computer age.

XMAS IS ONLY 43 DAYS AWAY
An assault on the Loveliness
by Josef Chase

Where were L.T.'s artistics, arrogant philosophies, and aesthetic groupies last Friday and Saturday night? Watching Theater III perform Tim Jones' parody on love, The Fantasticks in the Shubert Auditorium, they were, and they had no regrets for having been there, I am sure. Theater III's recent presentation was hilarious and delightful, all who were present would agree. And just in case you thought otherwise, I was there by virtue of a self-appointed expedition: I was just about to see something I had never seen before - a group of actors, I mean, who were actually dressed like human beings.

In the order of their appearance: Marybeth Troutman sketched a mute's antics, but was forced to present a laughing grin from her face, obviously through a sixth sense, after a rather amusing opener sequence. Higgins was once the辉辉, father of prosaic Matt. Eric stammered accordingly, like a good homely agrarian, and therefore filled the bill. Marcial Gomez portrayed Benomy, the male parent of an insane teenager named Luna. He was perfectly comical, pero, quand a la joie mache en, saphiru au palais, hayaya que hacer ma quinada. Mas un momento, esta bien. Luna, the scarlet, was done by Shelly Perry. With a select crew of actors did she let herself be seen, appropriating almost naturally. BLINDING her character's humanity with a youngster's temerity, sweeping the air with her voice and coupler her lines like a beguiling flaxie. She was funny, and she played it straight. Steve Perry, I submit, produced the best acting. He demonstrated well the pitfalls of ignatius philosophy. El Gallo was Mark Janeczko. He was very good, and in the next sense, too. I am sure.

To sum it all up, the music was flawless, the music clinked-chinked and clucked and it was wonder-ful entertainment, which ought to be more often. Also, little interest has been noticed.

Next semester, Theatre III plans to cultivate our spear's twice: Theatre III is the temper-ament spring breeze, evolving into fall's wind and succeeding tem-pestuous winter gale.

The Civil Engineer Corps. Because you can build a career faster, building for the Navy.

Whatever field of engineering or architecture you're now studying, you'll soon be ready for a responsible position. There's one place you're likely to build faster than your classmates in the Navy's Civil Engineer Corps.

You'll join a select team of professionals that plan, design, construct, and manage both complex naval and shore facilities and utilities worldwide. Not to mention development plans and undersea structures. For a CEC officer, it's a big opportunity. To get places, and get things. To gain the experience that can help fulfill the requirements for registration as a Professional Engineer. If you're now in your senior year, you're eligible to apply. And if you've worked toward your Engineer-in Training certificate, all the better. For more information, contact your local Navy Recruiter or ask your College Recruiter. Or, call toll free anytime at 800-445-3221, then press 6, 0, 0, 0, 0, 0. It's your life. Lead it. Be a Naval Officer.
Football Champs: Sigs

The University of Michigan football team dominated the competition this year, capturing their third consecutive championship. The win against Ohio State cemented Michigan's status as the No. 1 team in the nation. Michigan's defense was particularly impressive, allowing just 17 points in the final two games of the season.

Cross Country Concludes

IT's cross-country team concluded its 1976 season with a fourth-place finish in the CCAC Championships last weekend at Lewis University.

with CCAC

IT's varsity soccer season drew to a close somewhat earlier than originally expected because of a series of injuries among the team. The Hawks were given a bid to play in the NATOIA District 20 playoffs. This will be the first of an ITF soccer team to play in the NATOIA District 20 playoffs.

Soccer Season Semi-Successful

by Jerry McNamara

IT's varsity soccer season drew to a close somewhat earlier than originally expected because of a series of injuries among the team. The Hawks were given a bid to play in the NATOIA District 20 playoffs. This will be the first of an ITF soccer team to play in the NATOIA District 20 playoffs.

MVP Tony Hansen leading the Hawks attack

The Hawks finished with a record of 2-2-2 and 22 goals, an excellent finish for the young team.

The cross-country meet, freshman Brad Krayger again led the Hawks, finishing the five-mile course in 27:21. Captains Dave Funk van ITF's second finisher, followed by Brian Zajac, and Jim Badd.

A combination of young talent and hard work, and the improvement of the young runners was responsible for the team's success this year. Coach Delmar Daniel has given the team high praise this season, saying, "They trained hard every day, provided our work with encouragement, ran as a team, and were a tribute to the institution as well as the field." The season has not yet ended for Dave Funk, however. As a result of his 21st place finish in the District 20 meet, he will be competing in the CCAC Championships on November 20 at the University of Wisconsin-Parkside.

Teaching Jobs Open

With 107 nuclear powered ships now operating and 40 more on the way, the U.S. Navy is the largest operator of nuclear power plants in the world. As the foremost expert in nuclear power, the Navy needs talented instructors at our Nuclear Power Schools.

FBI agents said that the Navy was looking for people with a 55 degree, although postgraduate degrees are preferred.

New Instructors receive a direct appointment as a Navy Ensign and five weeks of training and briefing—no boot camp. Starting salary is approximately $10,000 (or more) plus all military benefits, including free dental and medical care, 30 paid vacations, and unlimited paid sick leave.

Instructors receive approximately $17,000 a year after their fourth year of teaching duty.

Instructors teach officer candidates going through the nuclear power training program at Mare Island, California or Orlando, Florida—no sea duty.

All qualified applicants are personally interviewed by Admiral H. G. Rickover, Director, Naval Reactors.

Requirements

Education: Degree in Math, Physics, Engineering, or other relevant field

Age: 23 to 27 years old

If you’re interested, contact Lt. Kay Adams, director at 444-6686
