SAE Begins Membership Drive; Student Branch is Objective
With the formation of a student branch of the Society of Automotive Engineers, the SAE membership drive began today. The student branch, founded by Professor of Automotive Engineering, Professor Kenneth E. Johnson, received a grant from the SAE and was approved by the National SAE Board. The student branch consists of SAE member students in automotive engineering and the SAE member students in the University of Illinois. The student branch will conduct membership drives and outreach programs. The student branch will be responsible for coordinating the student branch activities with the national SAE organization. The student branch will also be responsible for the student branch newsletter and other publications. The student branch will be responsible for the student branch website and other online resources. The student branch will be responsible for the student branch social events and other activities. The student branch will be responsible for the student branch fundraising and other financial activities. The student branch will be responsible for the student branch recognition and other awards. The student branch will be responsible for the student branch recruitment and other student activities. The student branch will be responsible for the student branch communication and other student activities. The student branch will be responsible for the student branch support and other student activities. The student branch will be responsible for the student branch leadership and other student activities. The student branch will be responsible for the student branch representation and other student activities. The student branch will be responsible for the student branch representation and other student activities.
Faculty Interest

A short time ago there was a decided lack of student interest in the campus. Organisations dwindled off in membership and gradually disappeared from the campus.

With the return of veterans and an increase in the interest of Navy men in student activities, MIT has become a well-run educational institution.

But through this transition period where was the faculty? Organisations striving to get back on their feet looked for guidance from a responsible voice.

One would think that the increase of student interest in school activities would bring an increasing correspondence in faculty interest.

But it hasn't.

At the last all-school dance, the "Integral Ball," the only member of the faculty present was President Hadley.

A group of enterprising students decided to form a drama club. They secured a director and an instructor, but instead of enlisting the help of all the professors, the all-professoress戏 was too weak. At least they found a sponsor, said "Willie," who is the name of the group now non-existent.

It is the aim of the professors to develop a drama club.

Also, the aim of the professors is to have just a bit more interesting... or so they thought. To help the students develop the cultural and scholastic sides of their education.

Another example of faculty complacency is the many professors who present their own lectures. The reason is that they do not know how to use the diners when they are whole. They simply regurgitate the important facts. They go on and on until there are two in the class who have completely assimilated the information. Then they leave the room.

The lack of support of student activities and affairs by the faculty would cause the student to feel that the institution is only interested in "work blankety."
Meet the Navy: Y-12 Way of Life is Tried and Tested

A Y-12 student is shown at IIT where the training of the Y-12's is taking place.

In a recent poll, the student body was given an opportunity to express an opinion on a survey conducted by the poll bureau, the student was asked if they believed that the training of the Y-12's was effective or not. Their answers have been from 'yes' and 'no'.

The poll was conducted by the Y-12 students on the campus of IIT. The results of the poll are as follows:

- For effective training: 60%
- For ineffective training: 40%

The results show that the majority of the students believe the training of the Y-12's is effective.
