Election Finals to Be Run Today

Runoffs to Be Held for Eight Class Offices

Race for ITSA Vice-Pres. Also to Be Balloted at Today's Final Voting

After an election highlighted by the most highly spirited campaigning in many years on the campus, the ITSA today announced that runoffs will be held for three major offices in the senior class, four in the junior class, and one in the sophomore class. Runoffs will be held only for the vice-presidency of the ITSA. Robert Gaul, sophomore, and R. H. Mowins will compete for the office. In the senior class, the runoff will be held for the vice-presidency of the ITSA.

In the hour before elections, Ed Arner, Frances Garber, Horace Halsey, Hal Horkin, Bill Huiras, Ralph Impey, Joe Kiefer, and Don Powers will hold their last meetings.

Runoffs will be held today for all offices. In the senior class, the runoff will be held for the vice-presidency, and in the junior and sophomore classes, the runoff will be held for the various offices.

The runoff is held for the vice-presidency of the ITSA. Race for ITSA Vice-Pres.

Pardon the Elbow!

In keeping with the times, Illinois Tech has developed a shortage of space that would make even the proverbial "bug in a rug" feel a bit cramped. At no other time in the history of the school has there been such an incentive to get off campus and out of the "Passenger" with the "smallest" that gets a seat in class this term. And for the latecomer? A seat on the window sill.

Under such conditions as these a new twist to the old problem of "courtesy" has developed. The soggy instructor's breast has been reduced to the point where the eyes of students causes the "tough and rugged" Armoire engagis to drop off their titles of "Easy Rider." At times it was a question of position and presents due the fair sex, and it was mastered with comparative ease by the masculine Techmen.

Now, however, the problem seems to boil down to one of understanding and forgiveness. After all, the fellow who gives you the eye with a "Texas" didn't mean to do it, it was just that eight other guys in back of him were in a hurry to get up the stairs! And what if you do have to look a line for half an hour in the back where his left foot cramps the older they get? Yes, one has to be mighty philosophical to forgive Darwin and his "survival of the fittest."

It is with an attitude of understanding that we must view the problem. Inevitably, almost everyone considers himself the fortunate one to be allowed to attend such a school as Illinois Tech when facilities for higher education are at a premium like they are today. It is with this in mind that the student accepts, with only a slight nudge, the extremely crowded conditions. However, it will be only thru the courteous cooperation of us all that this muddle will be kept to a minimum.

"What is the administration doing about this situation," you may ask. The answer—just about all that is possible. With present building restrictions, hope for any new classroom facilities have been little. The school, realizing the gravity of the situation, has applied for 90,000 square feet of surplus building area to be used as temporary structures for classrooms. The government has made no promiss as to how many of these valuable square feet it will come through with or whether it will make itself "in about 90 days." We can only wait, asquir, and see.

The outlook then is for continuation of these "very crowded conditions throughout the winter. So when you get that urge to go barreling through a crowded corridor, and knock a couple of people over, try to be at the bottom of the heap the next time.

Clean up, winter is coming, a drop in temperatures are in this hope and to 3,800 bodies there's bound to be more room!
Minister’s “Million Dollar Sermon” is Beginning of Armour Institute

by Paul A. Thompson

It has often been said “where there is a will, there is a way.” This statement has been proved many times. It was proved back in 1885.

Some years before, a young man, Frank W. Gannasius, graduated from college and entered the ministry. During the years following, he preached in several churches, and in 1885 he was called to the Plymouth Congregational Church. It was his ambition to become the head of the Sunday school when the church would be large enough to contain all the members of the church. He worked every day in the organization, but only dreamed and hoped that a million dollars would come his way.

After about five years of this, Dr. Gannasius began to think of himself and his end, and realized that he had a million dollars in his organization. He knew what methods would be used for teaching in his religious school.

The statement “I don’t know” is one of the most noticeable marks of intellectual freedom. It is known what he knows, and knows that there is a lot of information which he doesn’t know.

As it was, with Dr. Gannasius, he knew he did not know how to get the money, or how to get the information. He decided that in order to secure the million dollars he would have to do more than just hope, he would have to plan and set definite limits toward that goal. He decided that he should have the money before he died. He called the method that he would use to achieve a sermon the following Sunday. “How Would Do It If I Had A Million Dollars?” That night his new plan was presented in his sermon.

Arriving in the morning a few days later to a courtroom for a material organized by his church, he brought the idea to a church. During his excitement he took the roof and said, “I will give you all $1,000,000.”

The plan was then sold into the Stock Exchange. The board of directors held its meeting at church and stated that the church could not have $1,000,000. However, it was the idea that was accepted.

It was not generally known in the halls of the city as yet. When they discover their trust will be shaken to the roots, the church will see its downfall. It is not generally known in the halls of the city that it is being built.

For instructions from the top of the pulpit, the minister has maintained that all who want to be successful students must have at least a little money. This is the money that they will have in mind.

In Armour Institute, it is to be seen in the students, that they are genuinely interested, and it makes no difference whether they are students at a private or public school.

Minister Institute will be sixteen quarts to the pound, but sedimentation, and it makes no difference whether they are students at a private or public school.
Tech Needs Organized Athletic Program Now

By Ed Arceneaux

With the tremendous increase in enrollment in the past few years, several factors, contributing to the welfare and success of a student both now and after graduation, are undoubtedly growing or sadly neglected on campus. One of paramount importance and which many students are aware of is the lack of athletic opportunities. It is received by all administration and student body alike.

Varsity athletic activities have always been largely accepted by students as being of benefit to Tech. The administration, as a whole, looks upon athletics as merely something that is a way to keep the student body interested in athletics. Football Tech must also offer. Most of the faculty looks upon Tech as their place of business which has to be done, and when it is, it is to go home. Most students on the other hand are not favorably impressed with the sports programs when they first enter school and thus disregard it as of no interest in furthering the destiny of Tech in the field of sports.

When a student has been prominent in the athletic programs of high school or college, he is brought up to Tech with the expectation that he will continue them. This argument then becomes absurd since the merger of the Lewis and Arromon divisions. True, when the starting line-up of Tech and Varsity athletes comprised the starting line-up, but the idea that the merger of the two divisions meant that Tech athletics would continue to expand is not necessarily true. It is the responsibility of the administration and the students to make Tech athletics as successful as possible.

Basketball Drills to Begin Monday in Gym

Basketball practice will begin at 6:30 p.m. on Monday, Oct. 6, in the gym, according to George White, coach of the basketball team. The willingness to try out for the basketball team is being requested by all interested parties in the team. Practice will begin on Monday, Oct. 6, at 6:30 p.m. in the gym. The coach is hopeful that all interested parties will attend the practice.

McCauley Calls Cinder Squad to Fall Meeting

There will be a meeting of the Cinder Squad on Tuesday, Oct. 7, at 10 a.m. in the gym. All members of the Cinder Squad are required to attend. The meeting will be held in the gym. All interested parties are encouraged to attend.

Dr. McNamara Initiates Health Lectures Thursday

Health Lectures Thursday morning will be given in the Auditorium by Dr. J. C. McNamara. All faculty are required to attend and prepare a report for their respective classes. The purpose of the lectures is to promote the health of students and faculty.
Automatic Weapons Must Be Registered

Under the provisions of the National Firearms Act, all weapons designated to be automatic firearms, such as machine guns, machine pistols or any gun that fires one or more rounds of a cartridge or bullet with the same pull of a trigger, must be registered with the Commissioner of Internal Revenue. Failure to register such a weapon is a criminal offense, punishable by a fine or imprisonment.

Who’s Who Among Students Select 22 From Illinois Tech

Twenty-four juniors and seniors have been selected for the 22nd list of "Who’s Who Among Students in American Universities and Colleges." As such, students are chosen by faculty members or students designated by the faculty in the fall of the year.

The idea of giving recognition to individuals in a national competition is lauded by the National Association of Colleges and Teachers. The purpose here is to provide an opportunity for students to learn and grow from their experience.

The information also emphasizes the importance of business ethics across different industries. 

Drive for New ASME Members

The ASME will hold its first meeting of the session in the Assembly Hall this Friday, Oct. 11. All active members of the ASME and friends are invited to attend.

Alpha Chi Sigma Greets Dr. Rusthon

Dr. Rusthon, who is the current president of the national organization, will be giving the keynote address. The meeting will be held at 7 p.m. in the Alumni Room.

IF Council Elects Officers for Term

The first official meeting of the Interfraternity Council this fall was held on Thursday, Oct. 10. The officers elected for the term are:

President: John Petersen, secretary: Frank Kriete, treasurer: Harry Christensen, and handbook: Gordon Schmidt.

Betta Omega Nu to Meet: Old Members Return

Betta Omega Nu will hold its first meeting of the semester on Wednesday, Oct. 12. The meeting will be held at 8 p.m. in the basement of the Science Hall. All old members are encouraged to attend.
Use Airborne Television

Airborne television equipment has been developed in order to provide coast-to-coast television networks over a fraction of operating costs by satellite methods, as described at the Electronic Publications Conference as part of a discussion and demonstration of recent electronic developments at the Edgewater Beach Hotel.

Lambert R. Adams of Ransome Manufacturing Company described television equipment developed during the war for use in guiding additions to their objectives as much as 80 miles away. Characterizing this system as a new method of warfare for both offense and defense, Ransome stated that, "the guided missile will be the weapon of the future."

Experiments with lightweight television equipment were begun early in 1941 by the Army Air Forces at Wright Field, Ohio. Ransome said, this equipment, weighing less than 100 pounds and costing approximately $1,000, was installed in "war-worthy" planes or in the nose of airplanes to send pictures from portable ground receivers which the missiles guided directly to their objectives. In actual operation overseas, good results were obtained during experimental tests in the late stages of the war.

Aerophonic, an airborne system whereby programs can be broadcast by airplanes in sight with lightweight equipment was described by G. R. Nance of Westinghouse Electric Corporation.

Using ordinary methods for transmitting such programs only 100 ground relay stations and 50 relay points would be required for a program to be transmitted between New York and Hollywood. A similar result can be obtained by a network of 200 airplanes only 10,000 miles apart.

Each rudder could be designed to carry several television programs, FM network programs, fanfare, and motion picture theatre television. The coverage of a single such plane centering over Pittsburgh, for example, would represent a potential audience of 14 million people, double said.

Each plane would be capable of broadcasting television and FM programs to an area of 100,000 square miles utilizing an eight-channel network from New York to Hollywood. By adding nine more planes, approximately 51% of the area and 94% of the population of the United States could be covered. The total additional cost of operating the airplanes in such a program would be approximately $600,000, he said.

Pan Hellenic Council Plans School Dance

At their first meeting of the term last Tuesday, the Pan Hellenic Council formed plans for a large all school dance to be held sometime in November. The exact date is awaiting TSA approval.

Two representatives of each sorority on campus which will act as the chairs for the campus activities, Jean Niskilas was elected president of the group, while Bever Halech, Henry Dulk, and Maryhell Hovell were vice-presidents and secretary and treasurer, respectively.

In addition to these themes governing body, the Pan Hellenic Council stressed the following rules concerning security problems: 1. No rushes is to stay at a private home or dormitory all night unless active members of more than one house are present. 2. When a rush is staying as an active member of the house, there must be an active member of another security present. 3. Only girls who have been at ITU this semester are eligible.
