SU caper to honor new pledges tonight

Frankly, the tradition of fungicide pledges by male seniors at the University of Illinois is a quaint idea, but it serves a useful purpose: the creation of a. "..."
New plan offered for ITSA's money trouble

Once again this year during registration week and the week following, we heard the usual complaints about the bookstore. The long lines, inefficient service, and high cost of books were the major topics among student complaints.

One of the more experienced students traveled to bookstores and returned telling of the much lower cost of books there. They claimed that several other stores were underbidding ITSA's non-profit bookstore by 10 to 25 percent.

We all realize that ITSA is not supported solely by the students' tuition. Other sources of income must be utilized in order to keep the school solvent. If the bookstore is one of the sources of extra income let the administration admit it and take the non-profit tag off the store. If it is not realizing a profit, it should be. The loop bookstores, in spite of high rentals, sell for less than cost. However, there is yet another alternative.

This other alternative would solve the problem in which ITSA has experienced for the past two semesters.

This fall MIT inaugurated a co-op book program in which members who pledge to buy their books on the co-op are held by three faculty members. Management of the store would be under the joint control of students and faculty. Here prices and costs are cut. There are no dividends paid on the bonds held by the faculty members.

By adapting this progressive step to our own governmental setup, we could lower book costs for students and provide an additional source of income for the college. A co-op committee of ITSA, much like the SUC, could be created to supervise all aspects of the bookstore. They would completely control all finances, personnel, and policies. A full time manager need not be hired to administer the store and attend to strictly business matters. Retail costs could be adjusted so that only enough money would be realized to pay the staff of the store.

Then, in case of emergency, and only in case of emergency, prices could be raised 2 or 3 percent to supply additional funds for ITSA.

We believe that this plan, since it would benefit the members, would find wide acceptance. Now it is in the hands of the ITSA Board of Control to get behind this plan and obtain administrative approval. We hope it won't die of apathy as have so many previous plans presented to ITSA.

as I see it

by Frank Sheehy

Things are fouled-up all over the place. Our beautiful black book and oles. Bob Nichols at 1D is teaching three classes at the same time, in one room and in one other class. This kid pets around. An obvious fact was missed in last week's issue that might bear further explanation. Five instructors left ID over the summer. Shake up maybe! A bit of a joke. The enrollment is going to drop further if the traffic situation remains the same now on ID. A few more instructors should be added.

Recommendation: time to the President.

On the first of this year, discussions are taking place. The president is not in favor. The faculty is in favor. The students are in favor. The administration is in favor. The president is not in favor. The faculty is in favor. The students are in favor. The administration is in favor. The president is not in favor. The faculty is in favor. The students are in favor. The administration is in favor. The president is not in favor. The faculty is in favor. The students are in favor.

On Saturday, November 3rd, the Student Senate held its regular meeting. The president was present. The student body was present. The administration was present. The president was present. The student body was present. The administration was present. The president was present. The student body was present. The administration was present. The president was present. The student body was present. The administration was present. The president was present. The student body was present. The administration was present. The president

Collegiate World

Life in Korea lacking some splendor of the Far East

The following is a description of the exotic charm and oriental splendor of the Far East.

Korea is bordered on the east by the Yellow Sea, on the north by the East Sea, south by the Sea of Japan, and west by China's Hunan province. Some of the islands off the coast of Korea are inhabited by black people, some of whom own "honey cars." The other half are Chinese.

A nation of myriads of sticky antagonistic flies, mosquitoes and apparently unattacked children—all with running noses—plumbing conditions that defy Newton's dot theory, horrible weather conditions, housing problems aggravated by a birth rate competitive with white mice and rabbits, and, above all, transportation methods that resist description. Everything with the exception of an old fashioned motor on a wheelbarrow, is put on to use—a streetcar that look like a deer from a San Francisco cable line, pregnant motorcycles, horse drawn trolleys, with co-drivers, the inevitable rickshaw and all of these are ignored by the ubiquitous pedestrian.

Korea is the only country in the world where a woman can be seen with the naped out. It is a nation that has amazed me over the four thousand years through the fame and fame of people and peoples. It is a country where the inbred survives greater than the will to live.

Most countries leave us with a pleasant memory, but this is strictly a name-in-mouth deal. If you do have memories, they are apt in the middle of the night, to wake you, screaming at the top of your lungs and beating the hell out of your better half. So let's just call the whole thing off and forever pay for a bed for another occasion.

—Wisconsin State College Times

To the Editor:

As many students have probably noticed, Illinois Tech has a new "service car," in the form of a 1942 Cadillac which is almost always parked by the watchman's shack at the corner of Ashland and Federal Streets.

According to informed sources, the car was acquired in the following manner:

Two narcotics dealers, whose operation was observed while on the Illinois Tech campus, and the car was found to contain a supply of narcotics. The car then was taken to the local police station as evidence. The criminals were caught on the same property, a representative of the Institute was on hand, and when the opportunity presented itself, the police driver was permitted to take the car for the Institute for apprehending the criminals. The Institute was informed as to the fact that the criminals were in the car, and when the opportunity presented itself, the car was acquired for the Institute for approximately $200.00.

What I would like to know is: What kind of "service" is this for? Is this really part of the uniform for a narcotics car? Is this used by anyone? Is this to have any narcotics in the car? Is this to work at a rate of $3.00 per hour, chauffeur's fee paid? The car, even though the car is available to the outside world, and it is being used by the Institute for apprehending and breaking glass?

Fairy Tale

Pincus made another attempt to materialize into print the attempt was thwarted by the twin mums and their harem, but Pincus is forced to remain merely as a figment in the imagination of his co-authors, Alan Sherman and Murray Lustgarten.

A new sinister figure crept into the plot. An illicit editor known only as "The Chief" cast his evil eye on Pincus and decided that that was for him. After a long and sturdy struggle the figure was captured. And so Pincus will appear forthwith in the pages of Technology News.

This strip is hereby dedicated to its absent co-publisher. May the lack of knowing what to do when they call, their plot, and their plans, be rendered to actual incidents or characters living or dead is purely coincidental—Naturally!
Carman Hall construction slated for completion by spring semester of '53

Carman Hall, now known as ITT, will be the name of the new nine-story structure being constructed on campus. The building is being named in honor of the late Dr. George M. Carman, who was the first director of the Illinois Institute of Technology. His memory is associated with Armour Institute of Technology, which became Illinois Institute of Technology in 1946.

The building will be on the northeast corner of 33rd Street and Western Avenue, and its construction is expected to begin in September of this year. The building will have 600 rooms, each with a private bathroom, and it will be constructed of reinforced concrete and steel. The building will also have a gymnasium, a cafeteria, and a library.

Money given by APO book store service

Alpha Phi Omega, national service fraternity, which operates the one-cent Book Exchange on campus, has announced that it will begin payment on the books it has sold. The fraternity's book exchange began in 1952 and has been operated by the group to raise funds for its activities.

Musical organizations search for new talent

Once again this year the music organizations, under the leadership of David Gordon, director of music, are holding auditions for new talent. The following organizations will be holding auditions:

1. Symphony Orchestra
2. Wind Ensemble
3. Jazz Ensemble
4. Glee Club
5. Chamber Singers

Both new members and returning students with musical talent are invited to audition. Auditions will be held on Tuesday, October 1, in the Performing Arts Center.

Tau Beta Pi inducted into IIT

The Tau Beta Pi engineering honorary society has inducted new members into its chapter at the Illinois Institute of Technology. The new members include students from various engineering disciplines.

Fraternity pledges making nice

A new high for the percentage of pledges made by fraternity members on campus was reached this year as reported by IFC President Warren Demsky. Out of a total of about 3400 interesting male students, 133 have been pledged so far. Although this year's last pledge freshman still has a long way to go, the percentage of pledges made is significantly higher than in previous years.

The pledges are now in the middle of a two-week period during which no pledges can be made. By the end of the period, most of the pledges will have be inducted into the fraternity. The pledges are expected to be officially inducted at a ceremony to be held on October 15.

Enrollment up at IIT

The enrollment at the Illinois Institute of Technology is up this year, as reported by President J. A. Stebbins. The increase is attributed to the high quality of the educational program and the strong demand for engineering and technical education.

The increase in enrollment has resulted in the expansion of facilities and the hiring of additional faculty members. The university is also planning to add new programs in areas such as computer science and renewable energy.

The increase in enrollment is also expected to have a positive impact on the local economy, as the university is a major employer in the area. The university is also known for its strong research programs and its contributions to scientific and technological advancement.
Enrollment drop causes student body money cut

Because of a great decrease in enrollment, the amount of money ITSRA has to appropriate to student organizations this year has been cut by $8,000. The total amount that will be given this year is $29,000. The cut is due to the high operating costs and the need to increase the amount of money available for student activities.

Year positions available on sub-committee

The Student Admissions Ad-~
vice Board has opened for two new members to serve for one
two-year terms. This board is a sub-committee of ITSRA and is responsible for making recommendations to the ITSRA board on admissions policies and procedures.

Tau Beta Pi convention a success

The national convention of the Tau Beta Pi was held last Wednesday through Saturday, March 17, at the University of Illinois. The convention was a success and the members of the Illinois chapter are proud of their achievement.

Engineer undergrads get $5,000 in awards

The results of the fifth annual Engineering Undergraduate Award and Scholarship Design program have been announced by the James F. Lincoln Arc Welding Foundation of Cleveland, Ohio. Engineering undergraduates in 23 different schools have been given national engineering recognition and awards totaling $3,000. Scholarships awards of $500 have been also awarded to 3 students in honor of the first three award winners. Awards were made for the best design of model ship, and structure, and the best value of arc welding construction.

International club opens membership

The International club, which is open to all foreign and American students, is devoted to furthering better understanding of international relations. Through speakers and discussions on topics of current interest, the group seeks to make the campus more aware of the parallel of world life abroad and in the States.

Important Announcements

College students prefer Luckies in nation-wide survey

Nation-wide survey based on actual student interviews in 80 leading colleges reveals more smokers prefer Luckies than any other cigarette -- and by a wide margin. No. 1 reason given -- Luckies' better taste.

Lucky Strike gained more smokers in these colleges than the nation's two other principal brands combined.

Lucky Taste Better!
Basketball squad holds drills for new season

Intemational football game off to a rearing start Tuesday as the 2A player will be a candle in the dark.

As usual, practice time will be from 4 to 6 p.m., Monday through Friday, which does not give the squad too much time to get ready for their opening game with Lewis College on December 2. However, it is an excellent start for Coach Glaser, who is building his squad around six returning lettermen. In spite of this, Glaser is searching for new talent.

It was disappointing to learn that anti-mine frente was turned out for the first meeting. Everyone has some interest and ability to invite a visit at making the squad.

Perhaps you've heard something about the transmitter—a tiny, mechanically simple electronic device based on an entirely new principle. Its do-it-all properties and ease of use are likely to be appreciated by anyone familiar with vacuum tubes.

A few years ago this revolutionary device was invented and manufactured by scientists at Bell Telephone Laboratories. Today, several types of transistors are in production at Western Electric—manufacturing unit of the Bell System.

This didn't just happen. Its manufacture is the result of a labor devoted to research work by Western Electric engineers of varied skills and talents.

Transistors are unconventional looking little things, but don't let that fool you! The most dedicated metallurgical and machining skills are required in their production. In one type of transistor, there are three adjacent regions of germanium, each containing different elements in exact quantities, the whole unit being no larger than the head of a small flake.

Transistors can do many things transform radio energy for driving a telephone receiver or headlight—amplify weak signals—produce a-econvert a-c to d-c—respond to light—increase, decrease or filter the flow of current. Small and rugged, they're going to show up today in the Bell System and in varied types of military equipment.

Quantity producing these mighty machines—with laboratory precision—it is typical of many forward-looking engineering projects at Western Electric.

From Where I Sit

A familiar scene is unfolding before our eyes—Ed Glazer, whip in hand, driving the game that will go, emerge as the Illinois Tech basketball team. As here comes the knife, one, two, three men are cut from the number. As the hour comes out, "Oh, how will I ever get these guys in shape before the opener?" Yes, gentlemen, business is in order today.

Speaking of knives, seems as though a few have been wished upon Mr. D. Ballenger. With Dave Davey in director of fraternity athletics, and has been the butt of many jests.

It seems there was some friction among the members to quit lab at 4:00 (one fraternity has dropped out of the league because of sound). I can suggest that the IFC petition that daylight saving time be continued until after the final ball game is in order.

It is probably safer to assume that any of you who have read this far are reasonably interested in sports. The sports section of The Tech News is written by all writers. If you're not too tired from writing lab reports, put your name and place name in the Tech News box in the Union addressed to me.

The first week of Kilgus. "Profit" entries will end at 10:00 tonight. If you haven't pleased your prejudices for tomorrow's paper, send your name on the paper, as your names are listed in order of their appearance, and are due in the P. O. box outside of the office. But to all who have contributed a definite placement at what the prize will be until TESRA stops buying one of the most popular naps of all time on this magazine stand. Good luck. Probably will throw it in some especial if it is taken. The Advantages.
Second week for Prophets

As we swing into the second week of Prophets Prophecy, each formidable foe as Texas, Illinois, and Tennessee have already been upset. More seen in the making as Notre Dame and Purdue tangle in an intense contest, and Alabama travels to Tennessee.

The Irish, after stepping up on a powerful Texas over might be easy pickings if the Buckeye-makers put their minds to it. Navy could surprise Maryland, although the Terrapins are ranked number one by many experts.

 Pistol should have enough to stop Army, and in another Eastern battle, Penn has too many guns for Columbia. Michigan, after losing two heart breakers, will probably be out for revenge when they meet the Wildcats. The Wolverines got the end in this one. Colorado, Georgia Tech, Alabama, and Texas should be favored in the remaining contests.

The first week's contests will be played tomorrow and the results will be posted in the following issue.

NOSE, THROAT, and Accessory Organs not Adversely Affected by Smoking Chesterfield

FIRST SUCH REPORT EVER PUBLISHED ABOUT ANY CIGARETTE

A responsible consulting organization has reported the results of a continuing study by a competent medical specialist and his staff on the effects of smoking Chesterfield cigarettes.

They studied people of various walks of life. After six months this group of men woke up and smoked Chesterfield cigarettes. For six months the tobacco content of these cigarettes affected the normal amount of Chesterfield cigarettes — 40 a day. 45% of the group have smoked Chesterfield cigarettes continually from one to thirty years for an average of 10 years each.

At the beginning and at the end of the six-month period each smoker was given a thorough examination, including X-ray pictures, by the medical specialist and his assistants. The examination covered the sinuses as well as the nose, ears, and throat.

The medical specialist, after a thorough examination of every member of the group, stated: “It is my opinion that the ears, nose, throat and accessory organs of all participating subjects examined by me were not adversely affected in the six-month period by smoking the cigarettes provided.”

TBP as eligible requires

Two Delta Pi, big honorary, will be eligible for the minimum grade-point average in the major. Eligible students must rank in the top 10% of their class or average among the top 50% of all freshmen. A student with a grade-point average of 3.0 or above may rank in the bottom 50% of all freshmen. Eligible students receive professional instruction in the fine arts. Eligible students must be in the top 50% of their class. They may elect to attend the music program in the College of Fine Arts. Eligible students must have a grade-point average of 3.0 or more in their music major. Eligible students must be in the top 50% of their class. They may elect to attend the music program in the College of Fine Arts. Eligible students must have a grade-point average of 3.0 or more in their music major. Eligible students must be in the top 50% of their class. They may elect to attend the music program in the College of Fine Arts.
