TN's Food Poll — This Time We Mean It

The ITT population did not take the first Technology News food poll too seriously. Some students and organizations accused Technology News of undue favoritism on an important aspect of ITT life.

To verify our serious intent, we are running the food poll in somewhat less-loaded language.

Anyone who has any serious, constructive comments to make about the food served in the dorms, HUB eateries, Bag, Commons, etc., is invited to fill out the poll and return it to Technology News, 127/129, HUB basement.

The main thing wrong with the food is:

I would do the following to correct the above situations:

The facilities should serve more:

The following is being done right, and should be emphasized:

General comments:

Last Chance — Vote Today on ATS

If you have not yet voted, get yourself to the HUB, McCormick Lounge, or The Electric Pig and cast your ballot. The HUB and TEP's polls will be open until 5 pm. The one in the dorm complex will be open until 9 pm.

The present ballot on the proposed new constitution is probably the most important election in some time. It must be approved by 2/3 of those voting to become effective.

November 30th and December 1st will be the elections for the Homecoming Queen. Candidates are listed in this issue. December 3rd will be the start date for petitioning for ITS votes. The following offices are available:

If the referendum fails — President, Secretary, Assistant Treasurer, Assistant Social Chair, Engineering Rep., Liberal Arts Rep., Business Rep., and President.

You Truck Takes Salt

Police Stakeout Catches Car Thieves

by Paul Reynolds

One of the continuing problems facing the Campus Police is the proliferation of people (mainly students) who leave to forget to take their cars with them when they go. However, three weeks ago a new dimension was added to the problem — the abandoned cars started disappearing.

Previously, the campus police had allowed a supposedly abandoned car a month — then called the Chicago Police to tow it away to the City Pound. This situation, a change was put into the procedure. To understand the lot in as soon a time as possible, cars that appeared to be abandoned have been towed to the lot at 29th and State Streets (north of Kitting Hall). After this, attempts were made to locate the owner, if no one claimed the car after 10 days, it was turned over to the Chicago Police.

Last week, it was noticed that cars were disappearing from this lot after one or two days — usually in the late morning or early afternoon. Lt. Long, a 2-year veteran of the campus force, went to the 21st District Police Station and had a talk with Lt. Riedman of the District's Traffic Unit about the apparent thefts. Together, they decided that this would not work, hopefully, result in the capture of the thieves in the act.

After obtaining the lieutenant’s approval, Lt. Long had two recently abandoned cars cut into the 29th St. lot, and Lt. Riedman staked out two of his men in an unmarked car by Kenting Hall, with binoculars. They didn’t have long to wait.

About 11 a.m. a brand-new shiny low truck belonging to a South Side salvage yard drove into the abandoned car lot. It backed up to a 1963 Chevrolet, hooked on, and off it went, south on State Street. The driver apparently didn’t notice the cheap-looking two-model motion that followed.

At about 3rd and State Streets, the tow truck drove into a salvage yard. Although the Chicago Police were only 30 seconds behind, by the time they got into the yard, the Chevy was picked up.

An Apology

By a preceding oversight, in a recent issue of Technology News, a phone number appeared in the persons that happened to be the personal number of a Mr. and Mrs. Dorrance. We realize that we have thus unnecessarily given them a grave injustice, but one which is likely to happen with the most carefully guarded attention to the columns of the paper. Such mistakes are always to be regretted, as in this, and all such, simple and prompt explanation, which we are always prepared to make.

Do SOMETHING!

At the beginning of this school year, the ITBA Board of Control was hit by numerous resignations, including the President, Vice-President, Secretary, and Social Chairman (although that was not a resignation, it was just vacated). During the course of the semester, there were other resignations by various representatives, leaving, at one point, only one member of the Executive Board still there. This is not history, now. The Board is once again up to full strength, with enough people who are concerned enough to show up (generally) so why bring it up? Because we wanted to show that it was not really the fault of the present Board of Control that absolutely nothing was happening with the old ITBA. In other cases, you're putting the new Constitution to the student body. Essentially, this semester's Board functioned as a caretaker government, awaiting either the transition to the new ATS, or staying with the old ITBA. In either case, the Board was merely a holding action until new school elections could be held. This is not the fault of the Board members; rather it is recognition of the facts. The reason for this editorial is to give the Board members (first time, but probably not the last), those problems that face the new ATS or ITBA Board members:

1. WOMEN'S HOURS. This issue has been kicking around for over 10 years now—how much longer do we have to put up with it?
2. PARADET HOURS. For over a year, periodic extensions have been talked about—but little else has been done. This and Women's Hours are probably the two most pressing issues that face the new government.
3. ADMINISTRATION COMMUNICATION. Some advances have been made in this area, but there is room for tremendous improvement, especially among realistic, pragmatic lines.
4. MONE\$. The cost of everything has gone up—why not the ITBA budget? Harry Hefle, Treasurer of ITBA, has proposed that 2% of student tuition be allocated to student activities. This is a good move but it will be up to the new Board to do something about it.
5. FACULTY COMMUNICATION. The student body as a whole has even less communication with the faculty as a whole than they do with the Administration. This situation should be one of the first to be rectified.
6. PARKING LOTS. This is another issue that has been a good editorial subject for over 10 years. The parking lots now are much improved from 10 years ago—they have gone from untenable to barely tolerable.
7. LIBRARY HOURS. The library here isn't even open on Sundays. It's a great indication that there's little concern about the academic standing of IIT. I have never heard of another university library with such unbelievable hours. There are many other problems, to be sure, and solutions are not easily or quickly arrived at. But never let it be said that the problems are not there, or that they have never been pointed out.

Get Ready for 'Homestaying'

For a while it looked like this year's Homecoming might be different than those in previous years—maybe not as flashy, but just as exciting. Some rest, casual, personal, and conducive to good interaction between members of an otherwise rigid student body. The word from the Homecoming Committee, when it was first laying plans (as reported in TN, October 14 and 22) was that Homecoming would be free to all IIT students.

This plan has since been nullified, or replaced; the Committee now states that Free HC was never planned. When presented with the fact that HC committee members had written both Free HC articles, and the fact that the 'errors' had stood for almost a month without correction from the HC Committee, the Commis- tees admitted to an oversight.

Well, what do we have now? A cost to the Board on advance-sale tickets to HC and a charge of $4 at the door. But we all pay about $20 to the Board anyway (out of the ITBA Social budget), so a few more bucks for something that matters—everything else runs over budget, why shouldn't HC?

Then again, there's the party at the P trend Congress station both

LETTERS

Dear ED:IO:

According to Mr. Baschill's article last week, one might get the impression that the engineering-IIT head is concerned with what he can do in his personal life. I don't think that this is very accurate, and I believe that it seems to center around what work is more important.

The I-5's are concerned with aesthetic appeal, and original approaches to design problems, while the students are more concerned toward explaining how these designs work. The engineers, on the other hand, are more concerned with the aesthetic touches of the I-5's. But then, would they really want to?

D.K.

To George Stathakis:

It was Beethoven's music that sunk up the piano—not the loss. Besides, haven't you ever heard of Ludwig being seen without his "piano?" You think, perhaps, that he was an orchestra? He started his career long before he died. He is about the absolute worst boss for "Tech Frenzy", for that you could possibly find.

Pep's Loop, 3/14/68

Edwara, TECHNOLOGY NEWS, and
The Homestaying Committee

After only 10 weeks at IIT, I have decided that I must leave the institute. I will come back at the end of the year, and will not return until after Christmas vacation. This seems to be the only logical alternative open to me.

No TN Next Week

Next Friday, when you're at home gazing at your time capsule, you'll be glad to see the students with leftover ticketing. Did you honestly think you'd hang around just to bring out the rug with nobody here to read it? Cause there will be no TECHNOLOGY News next Friday. Our next issue will be December 4, 1970.

Chi Happenings — Miracles, Mothers, Ten Years After
by Gary Sagromsky

CLASSICAL MUSIC
The Chicago Symphony Orchestra this Friday and Saturday will present a program of Prokofiev and Mahler at Orchestra Hall, 473-9502.

The Lyric Opera of Chicago presents Puccini’s Madama Butterfly on Friday and Billy Budd on Saturday, 346-6111.

POPULAR MUSIC
Friday — Ten Years After — the British rock group will be at the Syndicate, 644-8105.
Saturday — Frank Zappa and the Mothers of Invention present their unique style of music at the Auditorium Theatre, 644-8005.
Sunday — Smokey Robinson and the Miracles are in concert at the Auditorium, 644-8105.

November 30 — Derek and the Dominos — Eric Clapton’s new group will be in concert at the Auditorium, 7-8662.

Zucchini Flies at ACU Meet

The representatives of 37 Union Boards in Wisconsin, Michigan, and the Chicago area, inaugurated the Abbey — a Lake Geneva, Wisconsin resort — for their annual regional conference November 13. Hosted by the ITU Union Board, the conference brought 238 representatives together to discuss the role of the Union Board on campus, the tools available to the Board, and the role of the region to the national happenings.

William J. Scott, the Illinois Attorney General, opened the conference after the initial ice-breaking with an address on the environment. The Attorney General’s prepared speech covered the Chicago area and Lake Michigan shorefront pollution. After the presentation, Mr. Scott fielded questions from the assembly. The questions, and answers, progressed from "what we as individuals can do about pollution" to the role of student government in America, ending in a discussion of the individual in a mass-oriented society.

On Saturday morning, Ernest W. Sprights, the president of the University of Wisconsin at Milwaukee, addressed the conference on student-faculty-administration relations. In his speech, entitled "Some Areas of Need in Higher Education," Mr. Sprights pointed out that the administration of any University is willing to listen to the students — if they are united behind a clear plan of action, and supported by the majority of the faculty.

For a change, the Union Boards were entertained Saturday evening, rather than entertaining. The Flying Zucchini Brothers and Their Famous Traveling Road Show, a variety local talent show, headlined the opening part of the night's festivities. Magic, comedy, acrobatics, and gentle temporary are the trademarks of the three brothers and four cousins from ITU, comprising the Zucchini Brothers and Road Show. "You can't appreciate not having seen the Zucchini Brothers until you've seen them!" said the traveling slogan. (Continued on page 8)

Straight Talk: Your diamond is at...
FORUM

In the general tradition of equanimity and optimism I'd like to endorse the title of the group which I call it 'The 1/5 & the 1/10'. I was quite active in it during our early years, and I think it is a very fine club. The main direction of the group is towards the promotion of the liberal arts, which I think is a very important function. The group has a strong commitment to the idea that we should be able to speak our minds freely, and that this is a key to democracy. In this way, I think the group is doing a very important service.

Sewer Lids - A Fun Obsession

By Dave DeMasse

Has the cap gone out of your life? Are you bored with a totally humdrum routine of going in and out of your bottoms pit and taking up the hobby of shiny plungers and retired sink cleaning engineers? Collect manhole covers!

It's fun, easy, and educational.

There are no financial holdings to fill apart in a week. There are only a few small puzzles to hang as rings in your hollow. Is there not a push up your tongue. No overpowering smell of glue and dope. And how else could you learn so much about the city's world-famous drainage system?

For the beginning sewerologist, very little equipment is required. The basic outfit consists of an assistant with little or no intelligence, four crowbars, and a "39" Sewer with heavy-duty suspension and a lot of trench space.

In order to explain the use of this equipment and the whole process in general, let us follow a seasoned collector on a typical manhole-cover hunting expedition:

12 midnight: Colleagues are already back at their respective homes. Collectors are excited and set out to make a few discoveries of their own. They go to the nearest area that promises to be rich in manhole covers - often in the poorer neighborhoods. Paper bags are brought to carry their finds. This takes time and effort.

1:00 a.m. - A sound recording of heavy rain outside is heard. Collectors are excited by the idea of finding manholes that are partially flooded with rainwater. They are determined to find the perfect manhole cover. They set off to search for the perfect specimen.

3:00 a.m. - Collectors are tired but determined. They continue to search for the perfect manhole cover, sometimes finding them in the most unexpected places. They are thrilled each time they find a new one and add it to their collection. Collectors are always on the lookout for the perfect specimen.

5:00 a.m. - Collectors are exhausted but satisfied. They have found the perfect manhole cover and are ready to return home.

6:00 a.m. - Collectors are back at their respective homes. They are proud of their finds and excited about the possibility of finding more. Collectors are always on the lookout for the perfect specimen.

PERSONALS - Ormalulu, Randall Go Conglomerate

Journey: 2001: A Space Odyssey

The movie is about a man named Bowman who is sent on a mission to explore the planets and discover new life forms. Along the way, he meets a woman named Zemski who helps him find a way to save the human race from extinction.

However, there are some downsides to this movie. For one, the special effects are not as good as they used to be, and the acting is a bit lacking. Overall, it's a great movie, but it's not perfect.

Sports Car: Lexus LS 400

The Lexus LS 400 is a luxury car that is known for its powerful engine and smooth ride. It's a great car for those who want a comfortable and stylish ride.

However, the price tag is quite high, and it's not the most fuel-efficient option on the market. Overall, it's a great car for those who can afford it.

Answers last week.

Here's the problem, kids. We have to get this beautiful canoe into a campus building without breaking it. The first big problem is that the doors are too small for it to fit through. What equation can you think up that would solve our dilemma? Better yet, can you think up a reality computer program that would help? Hint: The arrows are a big help.

The Claretians, a young and energetic religious community of men, need leaders to assume in-depth responsibilities for people in all parts of the world. Candidates should possess a strong desire to help others, a communications sense and the ability to coordinate the talents of others. To arrange an interview at our expense, please phone Father Lawrence Hope (312) 226-7782 or mail a note to him at 5866 West Division Street, Chicago 60661.
Why doesn't General Electric talk about thermal pollution when they talk about nuclear power plants?

General Electric pioneered the development of nuclear power plants in 1957. Right from the beginning, we felt that the greatest advantage of nuclear power was environmental. Unlike fossil-fueled power plants, nuclear plants don't burn anything to make electricity. And where there's no fire, there's no smoke. But there's a possible disadvantage as well. It, too, is environmental. The effects. We recognize it. One GE advertisement you may have seen recently pointed out that “all nuclear power plants discharge heat, as do fossil-fueled plants. America’s utilities, with many years of experience, are working on thermal problems at nuclear sites on a plant-by-plant basis.” General Electric does talk about the reality. Because they're important. But also because we feel the facts about them are perhaps too little known.

Few people realize, for example, that federal law requires utilities to operate their plants within strict temperature limits. Thirty states have even stricter laws. Utilities are spending millions of dollars on dilution flow systems, cooling ponds, and cooling towers to comply.

But, in addition, utilities are sponsoring basic research on the problem of heat exchange and its effect on aquatic life. More than 97 utilities have been financially involved in over 300 such studies. This is part of a national effort to learn more about the problem. Some interesting things have already come of it. For one, it’s been found that, in some cases, adding heat to water can actually be beneficial. Warm irrigation water has extended growing seasons. Warm water has created new-wintering ponds along waterfowl migration routes.

Power-plant discharge water is reviving Long Island’s oyster trade. Florida is using it to grow shrimp and lobster. In Texas, it’s increasing the weight of commercial catch by as much as 500%.

Listing these benefits is not to beg the issue. Thermal effects remain a tough problem to solve at some sites. Each plant must be considered individually, in its own environment, and this is being done. General Electric: electric utilities and environmentalists will continue to work hard. Because we think the advantages of nuclear power far outweigh the disadvantages.

Why are we running this ad? We’re running this ad, and others like it, to tell you the truth. General Electric is doing to solve the problems of man and his environment today.

The problems concern us because they concern you. We’re a business, and you’re potential customers and employees. But there’s another, more important reason. These problems will affect the future of this country and this planet. We have a stake in that future. As businessmen. And, simply, as people.

We invite your comments. Please write to General Electric, 570 Lexington Ave., New York, N.Y. 10022.
Discs: Jimi Hendrix, Otis Redding, Jesus Christ

by "The Deltar"

Otis Redding/Jimi Hendrix Experience/Hotline Performances Recorded at the Monterey International Pop Festival

The high point in Otis Redding's performing career. Otis really put himself out at the festival, sang with so much feeling you could almost hear him swear. His version of "Try a Little Tenderness" and the Three Day Night show at the Monterey Pop Festival were marketed as the "Rapunzel," after his hit. Also "Shake," "I've Been Lovers Too Long," and "I Can't Get No Satisfaction."

Jimi Hendrix, Noël Redding and Mitch Mitchell were well known in England but this was their first time on an American stage. Ian Mitchell was the bassist for Otis Redding, then it was the first time for Jimi Hendrix. He sang both his own songs "Can You See Me" and the songs of others, Bob Dylan's "Like a Rolling Stone" and B.B. King's "Riding with King."

A neat LP, a good buy.

Various Artists
Jesus Christ — Separation Decca DLX 7206

An 85-piece orchestra along with members of the Real Five, Joe Cocker's Great Sound, Lord Sutch, Beefheart, Quantic, Duster, The Big Three, Junior Levy, Quartet, Mersey Beasts, Plastic Penny, and Nucleus get together and make the second rock album of any importance.

This double record LP, the theme of which is the latest seven days before the crucifixions of Jesus Christ, was presented to New York at St. Peter's Church on October 27. At the presentation were priests, ministers, press attenders, and of course, the selling audience, teenagers. The cast was not just a bunch of comic relief as in Herod's Saxon. As soon as you can get $7 more, buy a ticket, listen, and get there at 87 minutes very soon.

Guitar Studio
Magical Counsellor Blue Thumb BTS 8023

Guitarist Studio, ever watchful for a bigger audience, takes material from Bach, David, Steve Howe, and John Sebastian, and yet's his normal format of jazz. Basically, if you are into rock and roll, you'll love this.

Harv sez: Tri Plugs Knothole

by Harvey Schaeffer

When the night’s lights dimmed and the “big play”
smashed through the air, Tri’s third-down
touchdown pass was sealed. The pass happened
in the second quarter of the game. The ball was
taken in by Tri’s quarterback, and he ran it
to the one-yard line. The next play was a
knothole, where the ball was kicked out by
Knot Hall’s center. Tri’s defense stopped the
kick and returned it for a touchdown.

Knot Hall’s defense was strong, allowing
Tri only one first down in the game. However,
Tri’s offense was able to score on each of their
touchdown drives, which resulted in a final
score of 14-7 in favor of Tri.

North Carolina State University, Raleigh

Triangle Flagellates PKS

by Randy Roberts

It was all over for everyone except the
Triangle, which was just starting its
season as a BIG football team. And just
as it should be, the championship
game was a real hot one. The
outcome was not decided until the
very last part of a ten-minute
period. The final score of the game
was Triangle 13, PK Kapps 6, but the
score was not too significant of the
game. The PK Kapps led by only
scoring in the first half and then
scored again in the second half, which
made this the only score to be
made in the whole game. The
touchdown was the result of a
double pass to the one-yard line,
and a run in from there. The
extra point was made, except that
a penalty was called on the PK Kapps,
and no point was made.

For practicality, the whole second
half, it was a battle between two
excellent offenses. The good of
the PK Kapps was countered
by a very sound defense
from Triangle. However, both
teams have balanced attacks,
both offensively and defensively.

This battle went on right up to the
last five seconds of the second half when
Triangle scored a short run. When their
try for the extra point failed, the
(regulation) time ran out with a tied score.

(Continued on page 9)

NROTC Over AFROTC

by Larry Slaughter

Last week, in a brilliantly played game, Navy ROTC beat Air Force ROTC, 26-0. Until then, the
National Championship was in the hands of the
AFROTC, but this week, the Navy ROTC took
over. Navy ROTC’s victory was solid, and their
three final points of the game was a testament to
their hard work and dedication. It then ran in for the
conversion, and that’s what made the make the
final score of the game. Navy ROTC is now the
Champion of the game. Congratulations!

This is what we have against
blades.

A shaft that shaves as close as or
closer than the new Platinum
and Chromium blades. We
find our Norelco Triplebender
fits against these new blades.
Each shows a side of its face with a
blade and the other with the
Triplebender. Our three-
footing length follows the curves of your
face, and seventeen blades shave in every
direction on yours (that’s the way
the beard grows).

Blades can’t do all this. They’re
unreliable. And that’s why we’re
say to our ten men and
the Triplebender shaved them as
closer or a little
than the new blades.

What’s more, the Triplebender
has a pop-up trimmer. Do you
can get your sideburns
right and even for a
change. How much blades
compete with that?

The Norelco Triplebenders
You can get any closer

This is what we have against
other rechargeables.

A rechargeable that gives you twice
as many shaves per charge as any other
rechargeable.

Our Rechargeable Triplebender 40CT has
all the features of our regular Triplebender.
It has three Microgroove™ shaving heads
and eighteen rotary blades that continuously
shave themselves to cut down on breakage or
recharge. A Charge Indicator tells you when
your rechargeable can shave with or without a
charge. A Charge Indicator can
charge on complete
with that.
