Parking availability, or rather the lack of it, has prompted an inquiry into the newly changed HUB parking lot policy. In a recent move by Buildings and Grounds in conjunction with the IIT Campus Police, a row of 30 HUB parking spaces was declared reserved for the use of A.A.R. members. The question has been taken to Mr. Howard Dewey, director of A.A.R. Technical Center. He stated, "Late in the summer, when parking on Federal Street was prohibited by IIT Campus Police, we were forced to ask for space in the HUB lot with the location and number of spots to be determined by Mr. Wurtz." Mr. Wurtz was questioned on why parking on such streets as 32nd and 33rd (west of State) and in particular on Federal Street was prohibited. He stated that considering the neighborhood around IIT, it was "to sacrifice parking space in the interest of increased campus security that come with more open and well lit areas." Wurtz also added, "A lack of cars in certain places makes the campus a bit more attractive as well as safer." Wurtz attributes the present premiums on parking space partly to "faculty who use student parking lot rather than faculty reserved lots." He also stated that he plans to review the A.A.R. reserved parking situation to determine if it does indeed make campus space more available to the students and faculty.

It's only fair that they get some space out of it." To find out why, after 30 years, A.A.R. now needs additional space in the HUB lot, the question had to be taken to Mr. Howard Dewey, director of A.A.R. Technical Center. He stated, "Late in the summer, when parking on Federal Street was prohibited by IIT Campus Police, we were forced to ask for space in the HUB lot with the location and number of spots to be determined by Mr. Wurtz." Mr. Wurtz was questioned on why parking on such streets as 32nd and 33rd (west of State) and in particular on Federal Street was prohibited. He stated that considering the neighborhood around IIT, it was "to sacrifice parking space in the interest of increased campus security that come with more open and well lit areas." Wurtz also added, "A lack of cars in certain places makes the campus a bit more attractive as well as safer." Wurtz attributes the present premiums on parking space partly to "faculty who use student parking lot rather than faculty reserved lots." He also stated that he plans to review the A.A.R. reserved parking situation to determine if it does indeed make campus space more available to the students and faculty.

New CB Appts.

Miles Kikuta, a senior from Hawaii, who has been named as the new Computing Secretary of the Communications Board, has been emaculating in Electrical Engineering and is a member of the NHTC program. The Computing Secretary of the Communications Board is selected each year for taking minutes of the meetings and counter-signs for all IIT, Technology News, Student Directory, Communications Board, and a year-end survey.

Students who are interested in running for the Computing Secretary position should fill out the form and return it to the registrar's office by 5 p.m. on Friday, October 13.

Miles Kikuta. new CB Secretary.

ATS Elections Coming

official campus elections for the Association of Tech Students have been postponed for one week. According to Jim Mandelbaum, head of the ATS election committee, the elections were postponed because there aren't enough students running for the offices. Mandelbaum said the assembly felt there simply wasn't enough time to publicize, and to give all interested students their chances to run for offices. Offices up for election will be Executive secretary, Graduate representative, and Freshman class president.

As of Wednesday night, only one person, has returned a petition running for ATS secretary. The only petition that has been taken out for graduate representative has yet to be returned. There are other people running for freshman class president.

The signatures of twenty-five fellow students are necessary to make a valid petition to run for an ATS elected office. Students wishing to run for offices must first obtain a petition. Petitions are available in the Dean of Students office in the main building. Petitions must be returned to the Dean of Students office by 5 p.m. on Monday, October 13.

The elections will be held on Monday and Tuesday, October 15 and 16. They will take place in McCorkell Lounge, at the HUB, and at each of the individual fraternity houses.

Student Robbed At State St. El

IIT freshman 13 student Mall was robbed at the 3rd Street El station late last Sunday. He lost a camera valued at $30, a stereo tape, a flash light, a roll of exposed film, his watch, and one dollar. Leaf said he was running from a visit to his home in South Bend, Indiana, and that he arrived at the El station at five minutes until nine on Sunday night.

He got off the train with a group of people, but he was one of the last people off. He was still on the platform when two teenager boys who were waiting in front of Leaf turned around and told him to give them his equipments. "They were bigger than me, so I just gave it to them," Leaf said. He said the two boys were about 17 years old.

Leaf then left the El and returned to his dorm, where he called the campus police at about 9:30. Leaf said the campus police returned to the station and they questioned the Chicago policeman who is stationed there. Leaf said The Chicago policeman said he didn't see anyone leaving the station who fit the description Leaf gave. After the campus police filled out a report on the incident, they took Leaf back to his dorm. "They told me I'd been bad," Leaf said.

This is the first incident reported at either El station this year according to the campus police. Leaf feels the incident might not have happened if the CTA or the Chicago Police had someone stationed on the platform as on the ground level.
Beer, but No Rum

Chicago area tavern keepers are cracking down hard on the new 30 and 30 year old drinkers for the first time in years. Tavern owners say they are having a hard time discriminating between those young people who are allowed to buy their liquor and those who are not. As the new Illinois law allows 18-30 year olds to buy wine and beer, they are legally permitted to sell them. These beverages are sold. It is the duty of the barkeep to make sure that these new drinkers order only beer or wine, but they are not able to enforce these rules.

Flat Grant System

As told by welfare-rights organizations, the new flat grant system is unfair and will not work. It eliminates special allowances and requires payments of money for emergency assistance. The flat grant system of welfare payments which began Monday, October 1, causes the same kind of hardships which welfare payments were designed to eliminate as a result of the new plan. Welfare recipients, welfare rights organizations, and welfare rights organizations working with welfare offices this week against Governor Ford's new system.

Favoritism?

State's Atty. Bernard Carey is seeking permission to institute a special grand jury to investigate official corruption. He has petitioned to strike District Judge Power to form an 18-month grand jury to investigate Mayor Daley's role in procuring city insurance business for a firm in which his son was employed. Certain contributions to Gov. Walker's campaign fund would also be investigated.

Although Judge Power is a close friend of the Mayor's, Carey is hopeful that he will receive authorization to pursue the investigation with a grand jury which could possibly bring about criminal indictments next year.

Meigs Field Tragedy

Meigs's Field has claimed its 7th victim in the last three months. John Flagg, 21, of Akron, Ohio, tried to land his plane on the field on the afternoon of October 10. The pilot wound up with black and blue marks on the face and body, and the plane was badly damaged.

It is known among air traffic officials and employees that many planes accidently mayland on Meigs Field due to take-offs, not in midair crashes or mechanical failures, as many people think. Meigs's field is not the only airport.

Ironically, he had been scheduled to land at Midway Airport, but his gear and visibility precluded that possibility.

Bakalis On Nixon Cuts

State School Supt. Michael J. Bakalis has warned that educational services in Illinois schools will have to be curtailed drastically if the Nixon administration's plans for a 9% per cent reduction in spending for Title II ESEA programs are carried out. Bakalis said that he is writing a report to the state's chief school official that a proposed 9% per cent reduction in spending for Title II ESEA programs.

Bakalis said that he is writing a report to the state's chief school official that a proposed 9% per cent reduction in spending for Title II ESEA programs. Bakalis said that he is writing a report to the state's chief school official that a proposed 9% per cent reduction in spending for Title II ESEA programs.
Announcements

St. James Paint-In

St. James Church, located at 2039 S. Wabash, will be holding another Paint-In to help restore the building. The Paint-In is scheduled for Saturday, October 6 from 9 a.m. to 3 p.m. A free lunch will be served. Participants interested in helping should meet in the church auditorium or contact Peter Mulaney.

Leadership Weekend

Most of us are in some position of leadership with people, be it family, school, work, or community activity. Skills in working with people are vital in task accomplishment. Leadership skills development will aim at developing skills in making the most of meetings, program planning, and getting accurate feedback from others. The focus will be on working the actual leadership problems presented by the members.

The Leadership Weekend will be on October 22-23 from 7 pm Friday to 6 pm Sunday. For more information, please contact 320-485-0666.

Detective Films

The students' services of the theater and fiction are brought to the screen in the Chicago History Museum's series in Fall Program of Films. Thus the variety of shows has been highlighted: "The Detective" in Holmes' in the History of the Cinema Series. Beginning Wednesday, September 21, Perry Mason films feature in "The Case of the Missing" in the Case of the Lucky Legs and Warren Williams as Mason. Also, Nancy Drew, the Case of the Lost Hat, and Sherlock Holmes in the Case of the Chinaman. On December 9, "Murder, She Wrote" with Jessica Fletcher will be shown on the stage in the museum of the Chicago History Museum.

Circus Tickets

A limited number of tickets are now available to the Thursday evening performance on October 26 of the Ringling Bros. Barnum and Bailey Circus. Tickets are $5 per person and can be purchased at the Box Office, 100 E. Madison St., Chicago, 60604. All proceeds will be used for the benefit of the Chicago Historical Society.

Death & Dying

In Elizabeth Kubler Ross will give a one-week workshop on "Death and Dying" on October 30, sponsored by the Center for Human Potential.

The workshop will be held from 10 a.m. to 4 p.m. at 200 E. 57th Street and Lake Shore. Elizabeth Kubler Ross is known as the author of the best-selling "On Death and Dying." Her book has been translated into 15 languages and is currently being taught in courses around the world.

The workshop will focus on understanding ourselves and our relationships. It is a way to stop playing small-defeating games and move toward genuine and satisfying contacts with others.

Religion Racket

Religion is what it is. It is a system of ideas and beliefs that is used to explain the world and our place in it. It is a way of life that gives us meaning and purpose. It is a way of connecting with others and with something greater than ourselves.

Reactor Seminar

On Saturday, October 19, there will be an all-day seminar on the problems of nuclear reactors and nuclear waste. The seminar will run from 9 a.m. to 5 p.m. at the Illinois Institute of Technology. The topics of the seminar will include:

- The problems of managing nuclear weapons are grave and urgent. For many years there has been much secrecy regarding the nature of nuclear proliferation, the safety of facilities and the handling of nuclear waste.

- People in Illinois have great reason for concern since so many nuclear facilities are located in the state. The Army has a location where nuclear weapons are kept. There are eleven nuclear power plants in the metropolitan area. These power plants, along with other industries, are responsible for much of the known radiation in the state.

- People in Illinois have a right to know the risks involved in the operation of nuclear facilities. The seminar will provide information on the safety of nuclear facilities and the risks involved in the operation of nuclear reactors and nuclear waste facilities.

- The seminar will be open to the public and will be held at the Illinois Institute of Technology, 9600 South Ellis Avenue, Chicago, 60617. For more information, call 312-678-4800.
Let AAR Park On Federal Street

We feel that the American Association of Railroads should be allowed to park their cars on Federal Street between 31st and 32nd as they did before this year.

The reasons are obvious. AAR would prefer to park on Federal Street. They have been forced to seek space in the HUB parking lot because Buildings and Grounds and the campus police don't want cars parked on Federal.

Some students now have to park their cars in the lot at 30th and State because of crowded parking conditions on campus. This lot is not as safe as the HUB lot, and parking there can be an inconvenience for many people.

The reasons for the parking policy, as told to us by Buildings and Grounds Superintendent Henry Wurst, are not very convincing. Campus security is a good reason to do something, but we feel security is not being helped here. Someone who would lie in wait between cars parked on Federal merely has to move three feet and lie in wait between cars parked in the HUB lot. Anyway, AAR didn't park on Federal at night, when security is a bigger problem.

It is patently absurd to cite aesthetic considerations as a reason for moving AAR's parking. Mr. Wurst was really serious when he did so. Granted, AAR does "a bit more attractive" without cars clattering up the street, but then student bodies look a bit more attractive when they haven't been mugged while walking to cars parked at 20th and State.

We don't dispute AAR's right to park in the HUB lot, they have held the lot's lease for over 20 years. People should understand that it's not AAR's fault that their parking has been moved to the HUB lot.

It is the flimsy reasons given by Buildings and Grounds that upset us, and should upset students.

We feel that security would be helped and not hurt, and that fewer people would be inconvenienced, if AAR parking was returned to Federal Street.

We hope the campus police and Buildings and Grounds will reconsider their policy, move AAR parking back to Federal Street, and re-open the back row of the HUB parking lot to general use.

Yours Disgustedly,
Vladimir Jonas

Let's to the Editor are your way of letting us know how you feel about anything. Technology News encourages students, faculty, staff, alumni, and parents to send in letters to the newspaper. We reserve the right to refuse publication of letters that are written in poor taste or contain obvious errors or misrepresentations.

Letters should be typed 60 characters to a line, double space; signed, and must be accompanied by the author's name and phone number. Names will be withheld upon request.

Deliver all letters in person to our offices in the HUB basement or mail them to: Technology News, 3241 South Federal, Chicago, Illinois 60616.

IN PERSPECTIVE

THE SPIRAL TAPES REVEALED!

The following material was bracketed from the private psychiatric offices of Dr. Agnes Frand. Technology News has accepted the Washington Post and New York Times with this material. This is tape 4 in a discourse between Spiral P. Askew and his chairman.

Dr. Good Morning Mr. Askew. What brings you here this morning?

Spiral: Uh, Mr. Frand, I'm sorry to say I have been unable to keep my last 3 appointments this month but I have been very busy of late. But it all came to a head last night when one of the house foramen said I had to be in somebody.

Dr. Mark Askew

Spiral: So many people have misunderstood my situation as being that I have reached the point where I must rely on you. I have my judge.

Dr. In simple terms relate to me how your problem started. I'm just beginning. Spiral: It all started when I was 15 years old. I had been paid a few dollars in stocks from the Archangel and the Hubert Hobby Shop. I unfortunately was caught in the small Commissioner Told me everyone knew everybody, and it was impossible to do anything bad and not be found out.

Dr. Well, guilt and paranoia complex.

Spiral: My legal eagle counsel Elliot saw my weekly expenditures in the hobby shop. And he brought me in my room with all the model cars. I was putting one together when Elliot took my picture with that new camera he was always playing with.

This was a very dangerous situation for me because I was a high ranking boy scout. Every boy in town was a Scout and I was on my way to becoming the next Eagle Scout in my troop. Well I figured Elliot would ruin me and would have stopped at nothing to prevent me from attaining my goal. I knew I had to act quickly or else he would get me in lots of hot water as he had done to others.

He was feverishly sending the rumor around that I had stolen several model kits from the hobby shop. He was going to present his evidence to Grand Scout master Courtyard. He wanted me disqualified as an Eagle Scout candidate.

Dr. Uh huh.Spinal: He couldn't do this to me. Not me. I wanted to be an Eagle Scout so bad. Everyone taking my mother, wanted it for me too. They all had so much trust in me.

At first I tried to get Elliot to forget about the whole thing at least tell them that I borrowed some model glue and not the entire stack of model cars. But Elliot was unmovable. He had all the facts. He read my father's help. Yes he could have blacked his secretary Elliot and I have no worries. My father was elected speaker of the Boy Scout Authority and we understood each other. A real father son thing. I thought that if he told the Scout master, Courtyard, and Elliot that he would handle me then everything would be all right. After all, he had to help me. I was following his example. He had also done things which were not polite socially, yet he lost nothing. But he wouldn't help me by taking up my case. He didn't want to bring attention to himself. His hands were tied.

It was a real trouble to me being face to face with my mother and lesser things. They had respected me and always supported me. In fact they had helped me qualify for my 10 of the 12 merit badges necessary to become an Eagle Scout.

Dr. Uh huh, father complex and mother fixation.

Spiral: All of my family thought I would be better at the position than the present Eagle Scout Bob Fischer. Mostly because he was in a lot of trouble himself. Hoots had had that he had cheated and forged 12 of his merit badges. I knew that the only 3 he had really earned were for public speaking, accounting, and mastery of the Morse Code.

The next day I tried to get help from Richard, but his claim to Eagle Scout was being investigated by Scoutmaster Courtyard and Erwin Samuel of the Boy Scout Authority. Richard said he didn't want two scandrels on his hands.

Dr. Uh huh, abandonment and isolation.

Spiral: By this time Elliot had turned over all of his evidence to Courtyard, and it was just a matter of time before I was called into the Authority Chambers. I told Courtyard that I did, in fact, take those model cars, but I did not steal them. No.

I explained that I wanted to earn the Civic Consumerism merit badge. Therefore, I had to inspect the merchandise. I cited precedents where Ralph Fischer had conned me or was it explained about thousands of defective paint tippers. Why couldn't I do the same thing? I shouldn't have used that argument, though, because Courtyard and my jurors believed it even less than my father did.

Dr. Uh huh, rationalization of the extreme and psychoplastic lying.

Spiral: As a result I was booted out of the scout troop. Never to participate again. Disgraced in the community. Humiliated in front of my parents and family. I was forced to work hard all summer to repay the shopkeeper, Mary Landers for all the model cars I borrowed.

There, I've said it, can you hear my Doctor? I have lost much sleep over my darkened past. I keep wonder what would have happened if Mr. Askew, your problems are not unique, and I assure you that history does repeat itself. That'll be the please.

In Honor Of The Oct. 1st Law
The IIT Alumni Association Invites You To A

Free Beer Blast

Friday, October 12 at 7:30 pm At The St. James Hall
With Mr. D & The Mary Band
by Jan Donskis

Last Friday night I was invited to the north face of Main Building by an unusual name. We were at Main: Why? To attend an open session of the Illinois Tech Model Railroaders (ITMM). My first words after climbing up to the attic and seeing the layout room and the gasping and wailing were, "It's not like Christmas, only it's bigger and there's all the time I can see for hours, only at Christmas time." The layout was clearly larger, but it was all there in the layout room, not just at Christmas time. The layout is much larger, with several hundred trains available to run. The separate trains can maintain the same time and features, with several others operating in the layout room.

Main Building in 1948 and survived the fire in the early fifties. The layout currently in use was begun in 1946. Track work in the area, nearing completion, with a large section ready to be replaced in the near future. The scenery, however, still requires a good deal of work.

Current membership consists of about 100 individuals, 50 of whom are members, and several "others," including alumni. Membership is not restricted to Tech students.

The ITMM began in the attic in Main Building in 1948 and survived the fire. By the way, this was the first fire at Tech, and four people are required to run a single train property.

Financial Assistance

A comprehensive list of sources for financial assistance is contained in a new booklet from the office of Dean Office of Public Instruction. Michael J. Baskin. The booklet contains information concerning scholarships, fellowships, traineeship, grants, loans, and educational assistance for veterans and dependents. The listings include data about qualifications, benefits, and where and when to submit applications. Inquiries about the financial aid booklet should be directed to Thomas J. Denny, Scholarship Office, Office of Public Instruction, 302 State Office Building, Springfield, Illinois 62706.

Danforth year renewable fellowships are open to all qualified persons who have serious interest in careers of teaching and administration in colleges and universities, and who plan to study for a Ph.D. For further information see Dr. Robert Bonner, Dean of Students, in Room 117 of the Main Building. Approximately 120 fellowships will be awarded in March 1974.

A booklet containing information concerning several variations of grants and fellowships in the Humanities, has now been produced by the National Endowment for the Humanities. For a copy of this 35-page booklet write to National Endowment for the Humanities, Washington, D.C. 20506.

The National Science Foundation Graduate Fellowship Programs have been expanded for students or first-year graduate students at Tech. These fellowships will be awarded for study or work leading to master's or doctoral degrees in the mathematical, physical, medical, biological, engineering, and social sciences, and in the history and philosophy of science. Awards will be made only in technical, educational, or business fields, in history or social work, or for work leading to a medical, dental, law, or joint Ph.D. Professional degrees. The annual stipend for Graduate Fellowships will be $5,000 for a twelve-month period with no dependency allowances.

The deadline for the submission of applications for NSF Graduate Fellowships is November 26, 1973. Further information and application materials may be obtained from the Fellowship Office, National Research Council, 2101 Constitution Avenue, N.W. Washington, D.C. 20505.

The Ford Foundation and the National Science Foundation have announced the following fellowships programs for the 1974-1975 year.

- Graduate Fellowships for Black Americans
- Graduate Fellowships for Latin American Americans
- Graduate Fellowships for Native Americans
- Graduate Fellowships for Puerto Ricans

The Ford Fellowships programs are for students who plan to pursue full-time study in the social sciences or arts, or who hold a first post-baccalaureate professional degree, such as the MBA, MPA, MS, or Ed.-M. A. and plan to continue on to the doctoral degree in preparation for a career in higher education. The fellowships are full-year only, but are renewable upon satisfactory progress toward the doctorate in maintenance.

Interested students should contact the Ford Foundation, 20 East 60th Street, New York, New York, 10021.

The National Science Foundation has announced that it will award 50 new, three-year Graduate Fellowships to individuals who have demonstrated ability and special aptitude for advanced training in the sciences. For specific, contact the Fellowship Office, National Science Foundation, Washington, D.C. 20550.

The Frontenac Foundation has announced the following fellowships programs for the 1974-1975 year.

- Graduate Fellowships for Black Americans
- Graduate Fellowships for Latin American Americans
- Graduate Fellowships for Native Americans
- Graduate Fellowships for Puerto Ricans

These fellowships programs are for students who plan to pursue full-time study in the social sciences or arts, or who hold a first post-baccalaureate professional degree, such as the MBA, MPA, MS, or Ed.-M. and plan to continue on to the doctoral degree in preparation for a career in higher education. Winslow Homer Show at Art Institute

The Winnowler Homer exhibit now at the Art Institute of Chicago is where you see much of the artist's best work. It is the most prolific and picturesque proviso of his opportunity to view his art as a whole, to develop some understanding of his art of the life of the independent artist. Winslow Homer began his career as a lithographer and watercolor engraver. His personal style and limitations of his two graphic mediums were reflected in Homer certain basic concepts that served as a basis for his later art. The first flood of these concepts was the importance of the line. The essence of the black and white graphic, the mainstay of the artist, production in watercolor and oil, and in monochrome special color of the art of the independent artist. Homer's technique was based on his understanding of the line which was emphasized on outline in the subject of the subject. The problem is not the line but the use of the line. The line is used to express the essence of the subject. The essence of the line is the basic concept of Homer's art as the communication of the subject. This is not to say that Homer was unoriginal with previous ideas. His work, particularly of the decade following the Civil War, investigated the new concepts which were occupied--his European contemporaries, especially Degas and the Impressionists. In "The Yellow Teacher's Picnic," he experimented with the effects of dappled light and atmospheric perspectives. His beach scenes "Long Branch" is an excellent example of his concern for atmosphere and the light of open air. These experiments did not lend him to the colour ex-pansions of the Impressionists, rather his major works are characterized by flat shapes arranged in complex, abstract patterns that are used exclusively in his "Right and Left." This one use of the areas outlined with sharp edges was also derived from his early graphic works as well. His final works, just as Homer had derived it from Japanese woodcuts, are the ones he investigated the same problems as his contemporaries, Homer's work is characterized by an advance, but not less good art.

Yet Homer never let the esoteric interest detract from the portrayal of his subject. As seen clearly in this exhibit, Homer's subjects gradually change from sentimental to dramatic to elemental. His early works "Snap the Whip," "Country School," and "Home, Sweet Home," are more advanced and express the attitudes he had in his subject as, and express the attitudes he had in his subject. The problem was traced to the A.M. model, the radio transmitter. A power supply component had apparently failed, which led to excessive current flow and overheating. The heat build-up eventually melted some enamel insulation and released smoke into the cabinet. It was this smoke which was seen coming from under the cabinet door.

The power supply fuse, which should have blown and prevented the overheating, was found to be blown. Because the Wilt engineers were unable to ascertain what was wrong, they erroneously placed the wrong fuse.

Two defective components were found in the modulator. These were a 10500 capacitor and a rectifier tube. Repairs should be finished by Friday, October 5.

**Ramblings**
**FRIGHT NIGHT THE NIGHT**

At about one in the morning last Thursday night, strange sounds could be heard floating around the night air and apparently emanating from the vicinity of the quadrangle. Such occurrences are not terribly unusual since it is difficult to tell what goes on there after sunset, but these strange noises were quite startling, since the dorm sounded like a haunted house. The sound seemed to be emanating from a room on the second floor.

Do you want the appropriate body heat protection? I shivered and wrapped myself in a blanket, but it was no use. I tried to sleep but could not. I decided to get up and see what was going on. As I walked into the room, I saw a figure standing next to the window. It was a ghost. I screamed and woke up, realizing that it was just a dream.

I have heard, for example, that they do not treat freshmen girls who eat white shoe polish and write 64.6, 6.6, 6.6. I don't know where these stories come from, but I think they sound plausible.

**October 5, 1973**

**Page 7**
New Baha'i Club

by Christine Roda

In the near future a Baha'i Club will be forming here at MIT. According to Marram Simbol, who is trying to get the club started, a constitution has been submitted to the school and is expected to be approved soon. You might wonder what Baha'i is. The Baha'i religion started in 1863 when a man called Baha-u'llah had an inspired dream. One of his followers, Baha-u'llah was then chosen to become the leader of the new religion. He died in 1892. Baha'i is established in every country in the world and is growing rapidly. A Baha'i House of Worship is located in Wilmette. According to Marram, Baha'i believe God is the most essential part of everything. "Baha'i is love and peace. We are still growing spiritually and Baha'i's rooms might be able to help us over this adolescence growth period." Marram said Baha'i clubs are a part of a national plan of the Baha'i Faith. Marram, who is a sophomore here, is working along with three other undergraduates and a graduate student to get the club started. All are members of the Baha'i Faith. Anyone interested in joining the Baha'i Club can contact Marram. Marram says they will not try to convert you to their faith because it is against their religion. The club will have films and speakers and you will be able to learn more about Baha'i if you wish.

If you would like to find out more about the Baha'i Club, you can contact Marram at campus radio station WHD. More details will appear in Technology News when the club is officially recognized.

Strange Ramblings

In The Night

continued from page 1

enjoying themselves. At this point I abandoned all previous chords and began writing my own. I had just realized that what I was doing was not really for the students in my class, but for something else.

I concluded this buildup by first calling out a transition into an ascending scale that I had just rehearsed. "Delta a-ba." No one seemed to take any of it seriously, however.

It must have been the military party guests decided that I was not serious about my "thoughts," because several of them stripped kicking their heels up on the floor over in my direction. Since I was not close enough to a tree to pretend I was just an old-lounging laugh, I decided just to stand still and pretend I was just part of the crowd scene, and to be bold.

In a few short seconds they all scampered off the roof into the same dark hole I couldn't see, and left me standing out in the night's cold air wondering if all this was worth getting my feet wet.

There was, however, one thing that was unique about the event. It seems that this was the first time this year I have seen more than a half dozen feet within walking distance of each other, who were not also within looking distance of either several strange friends or a basset hound.

As a matter of fact, my position is rather being around by the way traits manage to attract lonely girls in their desperation parties. But I do still fall to fully comprehend all the significance of a group of college boys running around the gras with a double-pedalled football bolstering up their group spirit and apparently their sense of manliness.

I would suggest that perhaps there is some deep subconscious connection between the two--that perhaps playing football is how we subconsciously practice for how they might handle their weekend parties--but when one thinks of that poor little football as being a subconscious symbol of an innocent young girl and then think of what is done to a football during the course of a game, the analogy becomes morbid.

Upon letting these thoughts wrench their way through my mind and slowly die, I noticed that the night air had finally returned to some meager resemblance of normality. The stillness just didn't seem the same.

Hi, I am the Spring-Thing. Let me tell you something about myself. I'm made out of elastic.
Clarke's New Novel Succeeds

by Curt Newton

The award-winning science fiction author Arthur C. Clarke has released his latest novel titled "The Art of Survival." This is the type of science fiction that Clarke is known for.

The novel features Rama, a massive space station that orbits the earth. The story follows the journey of a group of characters as they navigate the complexities of life aboard Rama. Clarke's attention to detail and exploration of human relationships is a hallmark of his work.

The book is a sequel to "Rendezvous with Rama," and it continues the story with a new cast of characters. The protagonist, a young engineer named Jake, is tasked with saving humanity from an impending threat.

Wright-Ingram Institute

Petitions Are Now Available
In The Dean Of Students Office
Petitions Are Due Back Oct. 10

ATS Elections Have Been Rolled Back To Oct. 15 & 16

Be In Student Government
Be The Next ATS Secretary Graduate Representative Freshman Class President

The set of survival in any large city is often difficult and sometimes near-impossible. But take heart, there is a team of experts ready to help you in the city. The technology of the city is constantly evolving, and the best way to stay informed and connected is to participate in the city's technology community.

The Wright-Ingram Institute offers petitions to students to participate in the student government. These petitions are due back on October 10th. If you're interested in participating, you can visit the Student Office to receive the petitions.

ATS Elections have been rolled back to October 15 and 16. This is a great opportunity for you to be the next ATS Secretary Graduate Representative Freshman Class President. If you're interested, you can visit the Student Office to receive the necessary materials.
If you’ve been reading the newspapers or eating lately, you probably know all about the outrageously high food prices. It’s gotten to the point where the only way to survive the week is to have dinner every other day. Well, I’ve come up with 25 ways to reduce your food bill by half: (not your stomach) — Here they are.

1. Eat half with your mouth closed.
2. Don’t eat anything.
3. Use a spoon fork with your rice.
4. Use the convex side of your spoon for your soup.
5. Use a dull knife.
6. Prepare all meals with Meat Tenderizer.
7. Chew your food 800 times.
8. Don’t eat anything.
9. Serve all main dishes in a sauce.
10. Don’t drink your milk, up it.
11. Serve all drinks in your glasses.
12. Make hamburgers 1/16 inch thick.
13. Make hamburgers 1/2 inch wide.
14. Serve only one hamburger per person, with a fry (ketchup). This will reduce the cost to $0.50.
15. Don’t eat anything.
16. Use chopsticks when eating.
17. When eating in crowds, use hands instead of a fork.
18. Stretch hambone before serving (ketchup: 2 oz.)
19. Don’t eat anything.
20. Eat pulp and wrap contents in your bag.
21. Divide cactus and put into 250 pieces. (Use a thin knife)
22. Serve cupcake, crunch at time.
23. Spread butter on with a toothpick (use toothpick).
24. Don’t eat anything.
25. Do not eat anything!!

The recurring suggestion of course is not to eat anything... and I wouldn’t laugh if I were you.

Note: Please send suggestions for other ways to reduce food bills to Ernest Valdes, c/o TVM News.

Thank you.

Raspberries

by James H. Salazar

(point one listening) This is certainly a most unpalatable record. Everything sounds the same — in fact, it’s average. The best thing is to agree to an address that would include the excellence of “Go All the Way” and “Love Me Like That.” But it looks like this is just a bunch of pop junk — a lot of waltzes and allusions. The best they could have done was to make an attempt to arrange a box potato for one small raspberry; you see, they didn’t even do that.

(continued)

Jimmy Pax thought to smugly add, “Earth’s the best.”

E.L. Valdes

POINT OF VIEW

Don’t Eat Anything

It’s just more of the stupid boogey we’ve heard being so much of.

ENGINEERING • COMPUTER SCIENCE • MATHEMATICS
UNPRECEDE{TED WORK . . . UNPARALLELED OPPORTUNITY . . .

CAREERS AT THE NATIONAL SECURITY AGENCY

Because of the nature and scope of the National Security Agency’s mission, we can offer you challenging and rewarding opportunities that are impossible to match.

At NSA, we are responsible for designing and developing secure, unbreakable communications and electronic systems to prevent, detect, and analyze much of our nation’s most vital information. The advanced technologies applied in this work are such that you will be quantity takes you beyond the known and accepted boundaries of knowledge. Consequently, your imagination and resourcefulness are essential qualifications for success.

The Career Scene at NSA. Engineers will find work which is performed nowhere else. Devices and systems are constantly being developed which are the most advanced in the Western World. As an Agency engineer, you will carry on research, design, development, evaluation, and production of systems, and large-scale cryptocommunications and electronic systems. You may also participate in related studies of electromagnetics, propagation, upper atmosphere phenomena, and solid-state devices using the latest equipment for advanced research within NSA’s fully instrumented laboratories.

Mathematicians define, formulate, and solve complex communications-related problems. Statistical mathematicians, matrix algebraists, and combinatorial analysts are a few of the tools applied by Agency mathematicians. Opportunities for contributions in computer science and theoretical research are also offered.

Computer Scientists participate in systems analysis and systems programming related to advanced scientific and operational applications. Software design and development is included, as well as support in hardware design, development, and modification.

Starting salaries are based on education and experience, and increase as you assume additional responsibilities. Further, you will enjoy the varied career benefits and other advantages of Federal employment without the necessity of Civil Service certification.

Check with your Placement Office for further information about NSA, or write to Chief, College Relations Branch, National Security Agency, Ft. George G. Meade, Md. 20747. Attn: M321. An equal opportunity employer. M.F. NATIONAL SECURITY AGENCY

Our representatives will be on campus.

TECHNOLOGY NEWS
by Terry Woodworth

In response to "A Soccer Fan (Representative of many)!" and in defense of soccer coaches Wendel and Wernick, I have a few things to say and facts to clear up.

Last week in the "Letters" column of Technology News, "a soccer fan" wrote some comments that were worth reading into. Lines 61 and 64 are not really too important. True, "soccer fan" rules out the possibility that the team has a lack of talent as the reason for these poor showings. "Soccer fan" reviews the team and indicates that "talent abounds." Coach Wendel and, as Athletic Director Ed Glancy take a different stand. The team does have six or as good players. But six out of 8 players on the team isn't on the field is surely an abundance of talent. Arkansas State is a great player, the best on the team, but 11 players not just one or two, make up a team.

This is the first year ITT has had a soccer team. It was only a club in past years, so a team assembling in talent cannot be expected. Give the team a few years to build itself up, then start criticizing it.

"Soccer fan," who mistakenly rules out lack of talent as the reason for the team's losses, accuses the coach of running at his players. Coach Wernick defended himself by blantly saying that he doesn't care if his players. Glancy supported both coaches, saying that he knows they don't mean it. I know Coach Wendel and Director Glancy. I don't know "soccer fan." I believe Wernick and Glancy. "Soccer fan" has also accused the coaches of "forcing players into defensive positions when their combinations are uncustomized" to playing. Surely if the team had 11 forwards playing on it, every player would not play forward and leave the defensive positions to it. In order to balance the team, the coaches have no choice but to play players accustomed to playing as forwards into defensive positions. The players are not playing not individually, but as a team. The coaches have made these decisions to further improve the team play.

"Soccer fan" accuses the coaches of "not keeping up with their players up-to-date on rules." Coach Wernick says that the rules are continually being revised during the season. He's tried to obtain a revised rule book, but as far as he knows none is out.

Coaches Wendel and Wernick do believe that "all players with experience and talent are equal," as does "soccer fan." There are no stars remaining in this season, and the team does not have players who are capable of keeping up with their team. I personally want to say that I'm hosting the soccer team and coaches to a party. A few new and inexperienced players will illustrate a good record in their first season. If the students, faculty, and administrative can get the team's support, maybe in two years to come (or even this year), soccer can be a very interesting sport at ITT can become a colossus.

Cross Country Results

by John Lyle

Here is the second week of Cross Country season and that is my second article and name of you are still living on earth "What is Cross Country?"

Cross Country is a race in which 7 or 8 representatives of each participating school run over a predetermined course. The length of the course is usually between 2 and 3 miles and consists of terrain from grass and asphalt to rocky hills and muddy valleys.

While 7 or 8 men can represent each school, only the fastest five can gain points for their team. Scoring goes like this: In Cross Country the lowest score wins. An example, if team A has 4 from 1st through 5th, their combined total would be 12 points. If team B took 6th through 10th their combined total would be the sum of 7, 8, 9, 10, and 11 points. In this case team A with 12 points would be the winner over team B.

Now down to specifics: Tech's Cross Country Team went to Ft. Gibson last weekend for a meet against the above-mentioned school and two others, Concordia and Elkhart. This was the first triangular meet with Elkhart falling to attend.

The Tech runners were all able to improve in their first meet and were all able to move up in the overall standings and so placed third.

Mark Holcomb, who came in first for Tech, will again receive our "First Foot" award for taking 3rd place overall in a field of 25 runners.

The other four runners who gained points for Tech are Mike Rectonsko, who took 8th overall, Dave Frank took 10th, Ed Chadwick, who took 11th with running in his first meet this season, and Ross Thomas who took 16th.

In my opinion, the indications are that this team will continue to improve as we all utilize the experience gained in these "first meet" meets.

I would like, on behalf of the team members, to thank those who were at the meet as spectators for Tech. There is no better incentive, in any sport, than to have people in the stands cheering one's efforts on.

Sports Briefs

Wrestling Meeting

A meeting will be held at Keating Hall in the chancellor room—vote side, 1st level—on Thursday, October 11 at 1 p.m. for all those interested in Wrestling.

Coach Tony Barbaresi is looking forward to a large turn-out of freshmen to bolster the squad. Practically all weight classes are open with particular need at 118, 133, 142. If weight is no object, "Experience," said the veterans, will be highly desirable, but not a necessity. We can teach you if you have the desire and if you'll show up. We have a good schedule, but we need your willingness to help.

Actual practice will begin on November 1, 1973.

Intramural Sign-up

The sign-up for Intramural activities is now being set up for the fall. A cross country meet will be run on Tuesday, October 23rd, open to all interested. The sign-up deadline is Friday, October 26th. 3000 yard meet will be held Tuesday, November 6th. The sign-up deadline for the fall is Friday, November 3rd. Volleyball games will be starting Tuesday, October 23rd. Sign-up deadline is Friday, October 26th.
