Proposed New Split

by Michael J. Harrington

Plans are now underway for the proposed reorganization of the relationship between IIT and its constituent research institutes and the Illinois Institute of Technology Research Foundation, IITRF. The reorganization is expected to be completed by Fall 1974. The reorganization will involve the creation of a new board of trustees responsible for the overall governance of IIT and its constituent research institutes. The new board will be composed of representatives from the University, the research institutes, and the IITRF. The reorganization is expected to improve the efficiency and effectiveness of IIT's operations.

Dr. Tera Hayashi, chairman of the proposed University of Technology Board of Trustees, has stated that the reorganization is necessary to address the current financial problems facing IIT. The reorganization is expected to result in significant cost savings and improved operational efficiency. The reorganization is expected to be completed by Fall 1974.
Mies and the Energy Crisis

N. R. C. Cooling Unit, designed by Mies van der Rohe.

It’s not the specifics of what they taught at IIT, but principles associated to Miesianism. But at IIT, just as everyone else everywhere, they must teach abstracts through models; models which these architects know all too well. And somehow, those fourth year projects being completed over at Cran at the moment seem to remind one of glass, steel, and of IIT.

But despite the insecure future of glass as a viable building material, Miesian ideas have not been threatened by energy restrictions of the future. He states that “The ideas are more important here. Mies’ school of thought is not dependent on any particular material (glass included).”

So it appears that IIT architecture is probably to remain with us despite all the criticism from energy conscious doomsayers. And if the universals that were so dear to Mies can be practiced in a time of energy conserving, then it seems the old master has scored somewhat of a strategic victory.

The election of our own president from the board of directors of IGT. In discussing the effects of such a move he said that "In most ways, IGT and MIT will achieve a more formalized and binding relationship. Our relationship will be strengthened basically the issues at IGT as we presently perceive them are authority over specific issues at IGT. He indicated that the board of directors would prefer to have "more control over the internal affairs of the Institute of Gas Technology." When asked about the financial considerations in the restructuring Linder said he expected an "increase in IGT's financial support to MIT." Dr. Linder feels that "we have developed new mechanisms that will develop stronger affiliations to coordinate our activities especially in the areas of education."

A member of the IIT Institute Planning Committee (IPC), the body charged with the organizing of long range plans and goals for the university, commented that "the possibility of such a split has not been discussed at the IPC meetings, information about this subject has not even been furnished to the IPC."
Plea For Student Involvement

This is a plea for student involvement in student life. Up to now, students have been passive spectators in their involvement in anything other than classwork. This has been due mainly to the effort of the administration. We find it interesting that only 50 or so students are involved in the major activities in any one year. We also find it disturbing that there is so much "inbreeding" of members. That is, there are so few people to go around that many people are working on two or three different organizations.

It is well that the major organizations, the Union, the Student Government, and Technology News, are all involved in such a predilection with the conclusion of the spring semester in the planning stage at the beginning of this semester that we chose to come to a mutual arrangement with Bob Kmak to do the series. He wrote the faculty administration interview series and he did a credible job of it. He was doing something that no student or member of the Technology News staff would volunteer their time or patience to do. There was only one problem: Bob Kmak was providing a major contribution to the paper and at the same time was not a student at Tech. The student working on a campus organization is frowned upon here, and justifiably so. For the student organizations exist to meet the needs and wants of the students. Ideally an IT student would have done the series and still we encourage people to come down to the news office and help pitch in.

Something else which will require student involvement in the upcoming ATS elections April 22 and 23. The news office is open every day and you can by the phone or at least get out and vote. You can always join ATS and become a voting member, you can join Technology News and write articles, you can join WUT and become an announcement. You can join.

It's your tuition that goes into most of these organizations and it is for you that these organizations exist.

Letters

"God Kicks..."

Dear Sir

I am a student at Morton College in Evanston and would like to express my opinion on your recent cartoon, "God Kicks..." in your April 1, 1974 issue of Technology News. I found this cartoon very repetitive and vulgar. I do however understand that this cartoon was probably written to express some amount of humor although I failed to recognize it. The story behind this cartoon was something out of a juvenile comic book and lacked common sense. This cartoon presented a negative attitude towards God, almost to the point of being sacrilegious. The poor use of the English language did not really help the point. Cartoons of this sort and tend to lower the caliber of your newspaper and are certainly insulting and degrading to your student body.

Name Withheld By Request
Dear Editor

It's too bad that the comic strip on page seven of the April first issue of Tech News was printed. God does not kick anyone's ass. God's love for man cannot be measured and he does not deserve the slap in the face He got in Tech News. The wonderful thing about God's relation to man is that by simply accepting Him, Jesus Christ, into our lives and by letting His will be done, we are made perfect in His eyes. All our sins are forgiven. The person who ashamed to sign his name and hates that disgusting comic strip should be relieved to know that God loves him, has forgiven him, and has no intention of kicking his ass.

Very Sincerely Yours,
Stephen Nyberg

Dear Editor

I'd also like to comment on your instructions regarding letters to the editor. I reserve the right to refuse publication of letters that are written in poor taste. In the future I hope you will apply the same policy to all articles.

Very Sincerely Yours,
John R. Winkle

Dear Editor

We have heard that some people were offended by the March 22 issue of Technology News. We would like to express our opinions that we did not find any of the material offensive and much of it was entertaining.

Dave Matulka
Scott Buckley
Mark Leach
Joe Ronsett

Letters to the Editor do not necessarily reflect or express the opinions of Technology News. They reflect the opinions of the writer.

Letters to the Editor are your way of letting us know how you feel about anything. Technology News encourages students, faculty, staff, alumni, and parents to send in letters to the newspaper. We reserve the right to refuse publication of letters that are written in poor taste or contain obvious errors of grammar or punctuation.

Letters should be typed or double-spaced, signed, and must be accompanied by the author's name and phone number. Names will be withheld upon request.

Deliver all letters in person to our offices in the HUB basement or mail them to Technology News, 3741 South Federal Street, Chicago, Illinois 60616.
Technopinions is a random sampling of opinion on campus, and in no way tries to represent all sides of an issue. This week's question is: What is your opinion of P/NC?

Michael Jerevice, MMAE 01—Since there is such an emphasis on your grade point average when you get out of here it is necessary to maintain your GPA for your own good. If you end up with a bad teacher, you can take that class P/NC and it can't hurt your GPA.

Scott Maniseh Chem 00—I never used it. It's pretty good though, but the faculty have a valid reason for wanting it thrown out. It should be used under the most stringent conditions. There should be provisions for its use, but not under as loose conditions as it's being used now.

You won't lose Java 98— I never used it. It is good for engineers to take their electives P/NC so they can concentrate on their majors.

Ed Blumias CS 96—I think it's a good idea. But the professor should know if the student is taking a course P/NC so he might push him if he's on the borderline.

Walter Filling MS/ME 96—I think it should be kept because it's an advantage for the student. It is definitely a good thing. I am discouraged by the faculty's actions against it. I don't think they see it in the light it should be viewed in.

Charles Cooper MMAE 97—I think it's good for students other than engineers. For electives it's OK and it's good if you don't like the elective but you have to take it for G/HR.

ATS ELECTIONS

ATS will hold elections April 22 and 23 to fill the offices of President, Vice President, Secretary, Assistant Treasurer, Graduate Student Representative, Senior Class Representative, Junior Class Representative, and Sophomore Class Representative. Any full-time student interested in running for office should pick up a nominating petition from the Dean of Students Office. Get 20 students to sign it, and return it to the Dean of Students Office by April 5. Position on ballot will be determined by the order petitions are returned to the Dean of Students Office.

Any candidate who has returned a completed petition should contact Election Commissioner Rich Anderson for a copy of the election rules. No campaigning will be allowed until Monday April 8, 1994.

The corner of 26th and California is tidy. A half dozen young cops are walking around. One, in a blue helmet. A young cop in an old Army jacket bends down to tie his shoe. His hair is cut short and his face is scrubbed. The bright yellow leather on his gray felt hat gleams in the sun. His platform shoes are scuffed and worn. One hand holds two large jeweled rings, the other is wrapped around the waist of a girl. They joke together and walk by.

I notice a little green board near the street, with a number on it. I wonder what it means. I realize that the building is larger than I originally thought.

**Chicago's Criminal Court**

Augustus Martin was assigned to cover Criminal Court. He came in Chicago where many of the city's felonies are tried. Here are his impressions.

It was a hot day. Western and California Avenue. And at the corner where the sun and sea had almost completely eroded the remnants of woods and grass that grew between the cracks. A large yellow taxi stopped. A red light flashed, and a man jumped out.

As I turned to look, I noticed a woman walking along the sidewalk. She was wearing a blue dress and carrying a large bag. I followed her as she turned the corner.

The woman stopped at a small store and went inside. I waited outside, watching her every move. She emerged a few minutes later, still walking along the sidewalk.

As I continued my observations, I noticed that the woman was wearing a white dress and carrying a large purse. She appeared to be in a hurry, making quick strides as she crossed the street.

I decided to follow her further. She turned onto a side street, and I continued to watch her from a distance. She seemed to be heading towards a particular building.

The building was large and imposing, with a set of tall windows on the front. I approached the door and knocked, but there was no response.

I continued to wait outside, hoping that someone would answer the door. After a few minutes, a man opened the door and invited me inside.

Inside, I found myself in a large lobby, with a receptionist standing at the front desk. I explained my purpose and asked if I could speak with the manager.

The receptionist listened to me and then called the manager. A few minutes later, the manager came out and introduced himself. We talked for a while, and I asked him about the building and its history.

The manager was very knowledgeable and provided me with a lot of information. He explained that the building had been an old theater and was now being used as an office building. He also told me about some of the famous people who had used the building over the years.

After our conversation, I thanked the manager and left the building. I continued my observations, noting details such as the architecture and the people who were passing by.

Overall, I found the experience to be very interesting. I enjoyed learning about the history of the building and the people who had been connected to it. I look forward to writing more about my observations in the future.
The Future Doesn't Work

by Dr. William Baxter Barnouw

"I have seen the future and it doesn't work."

This is the premise of Zardoz, the latest tour-de-force from John Boorman, the director of Deliverance. In this film he sees one possible answer to the population problem in the form of an isolated Irish monastery, surrounded by a force field (the Vortis), peopled by the immortal offspring of those scientists who originally conceived the master plan for humanity. Everybody else the Vortis is inhabited by specially trained working bands of exorcistresses, who ravage the countryside and exterminate all potential breeding. These friendly fellows are supplied with guns from a vast floating stone head, which broadcasts orders in all tongues: "This is Zardoz."

The presentation of the concept is somewhat ingenious, but it is occasionally wearying, although some marvelous visual effects serve to lighten the heavy-handed dose of satire. Connery looks a little funny with hisPropalaic bally and long-haired wig, but manages to keep his role fairly convincing, in spite of the British, monosyllabic dialogue he gets. Charlotte Rampling is fantastic as the hostess, the spiritual leader of the Vortis, and the whole master plan is eventually revealed in a manner that is really revealed as part of a greater, grander plan, a manifestation of nature itself. The film doesn't hurt a bit. This movie is, if nothing else, notable as a dramatic feat of self-indulgence on Boorman's part. All his personal whims and obsessions are catered to here, in the ecstatic union of sex and violence. In the inevitably anticlimactic ending, the characters are shown as part of the Vortis, the machine of death. In the end, the success of the film depends on whether you feel that Boorman has used his talent to its best effect, or whether you feel that the whole thing was a waste of time and money.

Further Wine Adventures

No Warter Barlow

I recently met an old friend who was working on his porch for the famous winery near his apartment to taste some new wines. He had just bought a new car and was discussing the wine with me. I asked about the grapes and he gave me a couple of recommendations. I agreed to do that on the porch.

When I arrived, he had only had a glass of wine, so I sat down and we began discussing the grapes. I asked him about the winery he was working for and he told me about the grapes they were using. He said they were using some organic grapes to make their wines.

I asked him if he had ever made a wine before and he told me that he had been making wine for about five years. He had been working at the winery for about ten years and was very experienced. He said that he was passionate about making wine and that it was his passion.

I asked him if he had ever tasted a wine that was made from organic grapes and he told me that he had. He said that it was a very different experience and that it was much better than the wine he had been making before. He had also tasted some of the organic wines and said that they were very good.

I asked him if he had ever thought about making a wine that was made from organic grapes and he told me that he had. He said that it was a very interesting idea and that he was considering it.

I asked him if he had ever heard of any other wineries that were making wine from organic grapes and he told me that he had. He said that there were a few wineries in the area that were making wine from organic grapes and that they were very good.

I asked him if he had ever tasted any of their wines and he told me that he had. He said that they were very good and that they were very different from the wines he had been making before.

Bruner Devastating

The Sheik Living Up - John Bruner - Radiance. I must admit that I began this book with a good deal of reluctance. John Bruner's books tend to oscillate between the very good and the very bad. In this case, I think it was the problem of the theme, the world with its kind of population explosion, industrialism, etc. In the late 60s, this theme would have been almost unbelievable a couple of years ago. Today, however, I think it is more important than ever. It seems that the book will be the last book that I read before I go into the bathroom. I have no desire to start thinking about the day's events.

New Age Seminar

An interdisciplinary High Seminar on the implications of the changing age structure in the population will be offered to students in the academic year 1974-75. The Seminar will run on a limited basis and will cover selected phenomena related to age structure: Students will sit for discussions, readings, game lectures, and a directed project.

The Seminar is designed for non-traditional students who are not planning to plan for life, and who have been the most difficult to recruit. The Seminar will run for a limited period, and will be held in the evening.

This Seminar will meet two hours a week and carry no academic credit. The Seminar is being organized and coordinated by C. Margaret Beatty of the Psychology Department. Interested students should contact Professor Beatty in the Psychology Department.

ATS Conference

The Association of the Student's Seminar will meet on the 15th of October, 1974, at the ATS Conference. The Seminar will be held in the evening and will be held in the evening.

The ATS Conference will be held in the evening and will be held in the evening.

Hundreds of American Students placed in RECOGNIZED OVERSEAS MEDICAL SCHOOLS through EuroMed

For the session starting July 1974, EuroMed is again offering American students the opportunity to attend recognized Overseas Medical Schools.

For further information, contact: EuroMed Ltd., 1456 Park Avenue, New York, N.Y. 10029.
- Court Continues

The defendant is standing next to the judge who is on the stand with the prosecutor. He is dressed in a suit and is speaking. The prosecutor is sitting at a desk and is speaking to the judge. The judge is holding a microphone and appears to be listening to the prosecutor.

- Vinter's Choice: Mass Produced

The text describes the process of mass production and the challenges faced by wine producers. It mentions the use of large-scale machinery and the importance of quality control in the wine-making process. The text also highlights the role of technology in improving the efficiency and consistency of wine production.

- Live Entertainment

The text mentions a live entertainment event taking place every Friday and Saturday at a location not specified. It is likely an event featuring live performances such as music, theater, or comedy. The text encourages attendance and mentions the location.

- Novice Games

The text describes an event called the Novice Games, which appears to be a competitive event. It mentions that the games are open to novice participants and are held on a specific date at a specified time and location. The text does not provide further details about the nature of the games or the activities involved.

- Master Points Will Be Awarded

The text indicates that there will be awards given for achieving master points in a certain context. It is likely related to a sport or a competitive activity, but the specific nature is not specified. The text mentions the awarding of points and the potential for rankings or rankings points.

- Entry Fee

The text mentions an entry fee for an event or activity, but it does not specify the amount or the nature of the event. It is likely a fee for participation in a specific event or gathering.
**Announcements**

**Coffee House**

Sears Holiday and David Juley, two talented U.C. students, will be featured at the After The Flood Colloquium on Friday, April 1 in Holiday’s act centers on music with Bob Udoni.

The Cafe house is located one block north of the S.F. area, in the basement of the S.F. campus. The event opens at 8 p.m. in room 201. The event is around the back.

**Phi Eta Sigma**

There will be a meeting of Phi Eta Sigma Freshman Honor Society on Thursday, April 11. All active members and new pledges are to come to room 303 of the Hub at 11 a.m.

**Rock Turkey**

Rock architecture in Istanbul, India, and Turkey is the title of a lecture to be given by George Danforth, instructor of the School of Architecture and Planning, on Saturday, April 6 at 11 a.m. in Ward Auditorium, Slough Hall. The lecture will be free and the public is invited.

**Personal**

Continued from page 1A of the head. The state concluded that she had bit him from behind the pipe after he was struck. Through the entire questioning and cross-questioning, the girl remains quiet. She studies the scene of her woes the way a student does during a boring lecture but never does she appear to be worried or indignant. The court saw the trial date and the mother led her away.

The deputy next leads out a man of about thirty-five years of age. He walks over to his lawyer and begins to converse with him. Apparently something is amiss on the prosecution. A few minutes elapse before a folder is recovered. The prosecuting lawyer seems relieved. A third cop is called to the stand. By now, I am familiar with what the cop is going to be doing so I watch the defendant. He is different from those before him; he is nervous but not exceedingly so. Throughout the cop’s testimony he takes notes and occasionally speaks with his attorney. At one point he is apparently shocked and drops his pencil. The testimony halts while he searches the floor. I start coughing uncontrollably and leave the courtroom for a drink of water. When I return the case is over.
The baseball team needs a manager. If you are interested in the position, contact Ed Stanley at Keating Hall or call X 916.

The varsity softball team and any other interested persons will hold workouts Tuesdays and Thursdays on the field west of the Student Building Complex. Workouts will be at 4 p.m. for the first week and 6 p.m. for the second week.

The final home football game of the season will be played on Saturday, November 9th. Tickets are available at the box office of the stadium. The starting lineup will be announced shortly.

The basketball team will open its season against the University of California, Berkeley, on November 16th. The game will be played at Keating Hall at 8 p.m. Tickets are $5.00 at the door.
