Grip Shifts, Smith May Go
by Jim Walker

Dr. Peter O. Smith, dean of the School of Engineering and Physical Sciences, announced yesterday a primary election for the post of dean of the College of Liberal Arts.

The announcement, which came as a surprise to many faculty members, was made at a meeting of the Department of Political Science and the Department of Social Sciences.

"I am pleased to announce that we are conducting a search for a new dean," said Dr. Smith. "This is an important decision, and I believe that we have selected the right person for the job.

"The search committee has been working very hard to find the best candidate for this position. I am confident that we will be able to make a decision soon.

"I would like to thank all those who have contributed to this process. It has been a challenging one, but I am confident that we will be able to find the right person for this important role."

The announcement was made after a discussion of the current situation in the School of Engineering and Physical Sciences. The department has been facing several challenges, including a decrease in enrollment and a need for new facilities.

"I believe that this is an excellent opportunity for us to move forward," said Dr. Smith. "We are committed to providing a high-quality education for our students.

"I am confident that we will be able to overcome any challenges that we face."

The announcement was met with mixed reactions from faculty members.

"I am concerned about this decision," said one faculty member. "We need a strong leader to guide us through these challenging times.

"I believe that we should have been given more time to consider the decision."
**Discrimination Complaint Heard**

A complaint of alleged discrimination has prompted New York Federal District Judge A. Lawrence Holtz to call for the appointment of a special master to investigate the issue. The complaint was filed by the American Civil Liberties Union (ACLU) on behalf of a group of former and current employees of the New York Times Company.

Writing Winners Announced

The National Committee to Promote the Writing of Freshmen and the National Writing Gallery, The Freeman's Writing Prize, and The Student Writing Prize have cooperated in selecting the following winners for their 1983 Writing Prize:

The Freeman's Writing Prize will be awarded to John N. Clark, Jr., a Freshman Writing Prize to Brian R. Brown, and a Student Writing Prize to Michael J. O'Brien. The winners will be notified of their awards and given an opportunity to submit their work for publication in the Spring issue of The Freeman.

In addition, the following individuals have been selected to receive honorable mentions:

John T. Brown, Arizona State University; James D. Johnson, University of California, Los Angeles; and David A. Smith, Massachusetts Institute of Technology.

ASME Chapter Growing and Touring Here

The ASME 1985 Convention will be held in Chicago from May 5 to 8. The convention includes a variety of technical sessions, workshops, and exhibits. The exhibits will feature the latest developments in engineering and technology, including new products, services, and technologies.

DOSO: Inside or Outside IIT?

By Paul Stedeford

The selection of a new campus of Students may be numerous, depending on the size and mission of the institute. A single campus may be sufficient for the purpose, or a combination of small campuses may be needed. The last two options are currently being considered by the ASME Board of Directors.

ATS Elections Inconclusive

ATS election was held in October, for the first time in history. The election was a complete success, with a record number of votes cast. The results of the election will be announced in the next issue of The Freeman.

The four candidates for Vice President were:

- Douglas C. Baker
- John J. DeSantis
- Richard E. Fortin
- Richard M. Schreiber

The candidates will be announced in the next issue of The Freeman.

What does this mean for us? More...

Martin Tours US, Seeks IIT Funding

By P. E. Anderson

Dr. Martin has just completed a visit to the United States, where he spoke at various universities and industry conferences. He was invited to speak at the Massachusetts Institute of Technology, where he gave a talk on the current status of IIT's research and development programs. Dr. Martin also met with government officials and business leaders to discuss the future of IIT.

The trip is of great importance. It will help to establish the reputation of IIT, and to bring international attention to the campus. The results of the trip will be announced in the next issue of The Freeman.

DOS Search: Where and When?

Director of Campus Life "BIT" Brown recently announced that the search for a new student body president is being expanded beyond the confines of ITT. "We can now consider anyone beyond the student body," Brown said.

At the beginning of the search, Brown had revealed that the search committee was considering candidates from all over the nation. The extended search process has been prompted by the desire to find a candidate who would be a good fit for the university.

The search committee has received over 100 applications so far, and the final candidate will be announced in the next few weeks.

Election Time Blues

It was that time of year again, election time, when good people make bad decisions. The time when the candidates are fighting for votes, and the citizens are fighting for the best candidate. It was a time of uncertainty, a time when the outcome was not certain.

The number of irregularities and genuine absurdities is difficult to comprehend. Consider: APDO (the Student Political Party) has never been known to provide accurate results. They have a reputation for being biased towards the candidates they support. The results of the election are often manipulated to suit their own purposes.

The candidates are often so focused on winning that they forget about the needs of the students. They are more concerned with getting votes than with providing good governance.

The election process is often marred by voter fraud, which can severely affect the outcome. It is a time of uncertainty, a time when the future of the university is at stake.

Letters

Dear Editor,

As I mentioned in my previous letter, I received a call from a student who was concerned about the election. They said that they had witnessed some questionable behavior at the voting booths.

I understand that you have received similar concerns, and I want to assure you that we are taking these allegations seriously. We will be investigating the situation thoroughly.

Thank you for your continued support and for keeping our campus informed.

Sincerely,

[Signature]

TECHNOLOGY NEWS

by Dan Valado

Early in the morning of August 4, 1975, the historic Washington Monument was struck by lightning, just 20 days before its 100th anniversary. The monument, a 555-foot tall obelisk, is a symbol of American pride and a symbol of the nation's capital.

The monument was struck by lightning, causing minor damage to the structure. The lightning hit the monument at the top, causing a small fire to break out. The fire was quickly extinguished by the Washington Monument Society.

The monument was closed to the public for several days while repairs were made to the structure. The repairs included replacing the damaged parts of the monument.

Art and Crafts Festival Thursday

The first annual Art and Crafts Festival is being held in the city this Thursday from 10 a.m. to 5 p.m. The festival will feature works from local artists and craftspeople from all around the country.

The festival will be held on the main square of the city, with booths set up throughout the area. Visitors can browse through a variety of artwork, including paintings, sculptures, pottery, and jewelry.

Shelby Star, galactic superhero!

Shelby Star is a galactic superhero who protects the universe from evil. Shelby Star is a symbol of hope and strength, and his presence is a source of inspiration for all who believe in justice.

Shelby Star is a symbol of the power of unity and cooperation. The superhero is always accompanied by a team of loyal allies, who work together to overcome any challenge.

The story of Shelby Star is one of courage and determination. The superhero is a beacon of light, inspiring people to believe in themselves and their ability to make a difference.
Old Tech Graduate Works at Life

Two years ago, I paid for my education by working at President Communications. I used to drive staff cars from the office in downtown Austin to the airport, but I eventually wore out the rhumba and drones like my parents. I vowed to get away from the office of the daily news and start a new career. I became a reporter on the staff of the Austin American-Statesman, the largest newspaper in the United States. I was a reporter for ten years until I was laid off. Last year, I decided to return to the University of Texas at Austin to pursue a master's degree in journalism. I am now working as a reporter at the Daily Texan, the student newspaper at the University of Texas. I am also working on a novel about the life of a working journalist. I have been accepted into the Ph.D. program at the University of Texas at Austin, and I will be starting in the fall.

Elk Grove Firm Cleans Coal

**Polypore System**

The air pollution abatement center located on the island of meeting the high cost of new equipment, the power-generating and coal-fired power stations. The system is designed to remove sulfur dioxide, the main component of sulfur oxides, from the flue gas. The system uses a combination of chemical absorbents and heat exchangers to separate the sulfur dioxide from the flue gas. The system is also designed to remove other pollutants, such as nitrogen oxides and particulate matter, from the flue gas. The system is also designed to reduce the emissions of greenhouse gases, such as carbon dioxide, from the flue gas. The system is also designed to reduce the emissions of hazardous air pollutants, such as mercury and arsenic, from the flue gas. The system is also designed to reduce the emissions of particulate matter, such as soot and ash, from the flue gas. The system is also designed to reduce the emissions of nitrogen oxides, such as nitric oxide and nitrogen dioxide, from the flue gas. The system is also designed to reduce the emissions of sulfur oxides, such as sulfur dioxide and sulfur trioxide, from the flue gas. The system is also designed to reduce the emissions of volatile organic compounds, such as benzene and toluene, from the flue gas. The system is also designed to reduce the emissions of heavy metals, such as lead and cadmium, from the flue gas. The system is also designed to reduce the emissions of radioactive materials, such as uranium and thorium, from the flue gas.

Fierce Fighting Wages

by Mitch Freen

This year after the big wage saga in
Passaic and Willingboro, New Jersey, the
union uprising that hit the steel workers
hard has not quite died down. A lot of
people are saying, "Why?" and it is for
the simple reason that the steel workers
are not really getting their money's worth.

In the steel workers' battle with the
steel companies, there is a lot at stake.
The steel workers are fighting not only
to get a fair wage, but also to keep their
jobs. The steel companies have been
increasing their profits at the expense of
the workers. The steel workers are
determined to fight back.

Baseball Looks Ahead

by Mitch Freen

In the late 1930s, there were
many young and talented baseball
players in the United States. Many of
them were just starting their careers,
and some of them were already
establishing themselves as future
legends. The young and talented
players of that time were the ones
who would go on to become the
cornerstones of the Major League
Baseball Hall of Fame.
